

## COURSE DESCRIPTION – ACADEMIC YEAR 2021/2022

<b>Course title</b>	<b>Software Maintenance and Evolution</b>
<b>Course code</b>	76064
<b>Scientific sector</b>	INF/01
<b>Degree</b>	Software Engineering for Information Systems (LM-18)
<b>Semester</b>	2
<b>Year</b>	2
<b>Credits</b>	6
<b>Modular</b>	No
<b>Total lecturing hours</b>	40
<b>Total exercise hours</b>	20
<b>Attendance</b>	Not compulsory
<b>Prerequisites</b>	--
<b>Course page</b>	<a href="https://ole.unibz.it/">https://ole.unibz.it/</a>
<b>Specific educational objectives</b>	<p>The course belongs to the type "affine o integrative" – and is part of Advanced Topics in Software / Systems Engineering.</p> <p>Software systems can be in use for years, if not decades – extremely long time periods during which they must be continuously updated to in response to changes in customer needs or other factors. The goal of this course is to teach students basic and advanced techniques in order to successfully evolve real-world software projects. The course will cover the following key software maintenance and evolution activities:</p> <ul style="list-style-type: none"> <li>○ Concept location</li> <li>○ Impact analysis</li> <li>○ Actualization</li> <li>○ Refactoring</li> <li>○ Verification</li> </ul> <p>The concepts seen during the lecture will be practiced during a project on a large, established open-source software.</p>
<b>Lecturer</b>	<a href="#">Romain Robbes</a>
<b>Contact</b>	Piazza Domenicani 3, Room 1.16, <a href="mailto:RRobbes@unibz.it">RRobbes@unibz.it</a> , +390471 016025
<b>Scientific sector of lecturer</b>	INF/01
<b>Teaching language</b>	English
<b>Office hours</b>	To be defined and published on the web page of the course.
<b>Lecturing Assistant (if any)</b>	--
<b>Contact LA</b>	--
<b>Office hours LA</b>	--
<b>List of topics</b>	<ul style="list-style-type: none"> <li>• Introduction to software maintenance and evolution</li> <li>• Software Refactoring</li> <li>• Mining software repositories</li> <li>• Machine learning for software engineering</li> <li>• Using software metrics to assess and monitor the quality of software systems</li> </ul>

	<ul style="list-style-type: none"> <li>Using textual analysis techniques in the context of software maintenance and evolution</li> </ul>
<b>Teaching format</b>	Frontal Lectures, paper presentations, in-class exercises, and group project

<b>Learning outcomes</b>	<p>Knowledge and understanding</p> <ul style="list-style-type: none"> <li>D1.2 To be able to analyze and solve even complex problems in the area of Software Engineering for Information Systems with particular emphasis on the use of studies, methods, techniques and technologies of empirical evaluation;</li> <li>D1.3 To know in depth the scientific method of investigation applied to complex systems and innovative technologies that support information technology and its applications;</li> <li>D1.8 To be able to read and understand specialist scientific documentation, such as conference proceedings, articles in scientific journals, technical manuals.</li> </ul> <p>Applying knowledge and understanding</p> <ul style="list-style-type: none"> <li>D2.1 To know how to apply the fundamentals of empirical analysis of ICT data to the construction of mathematical models for the evaluation and prediction of characteristics of applications and software systems;</li> <li>D2.3 To know how to apply the principles of software engineering to domains of different complexity, both IT and non-IT, in which software technology is of great importance, such as, for example, in the transport sector or in the medical field;</li> <li>D2.5 To be able to extend and modify in an original way an existing technical solution or a formal model taking into account changed conditions, requirements and evolution of the technology</li> </ul> <p>Making judgments</p> <ul style="list-style-type: none"> <li>D3.2 To be able to plan and re-plan a technical project activity and to carry it out in accordance with defined deadlines and objectives;</li> <li>D3.3 To be able to define work objectives compatible with the time and resources available;</li> <li>D3.4 To be able to reconcile the objectives of the project that are in conflict, to trade-off cost, resources, time, knowledge or risk;</li> </ul> <p>Communication skills</p> <ul style="list-style-type: none"> <li>D4.2 To be able to present the contents of a scientific/technical report to an audience, including non-specialists, at a fixed time;</li> <li>D4.5 To be able to prepare and conduct technical presentations in English;</li> <li>D4.7 To be able to carry out research and projects in collaborative manner;</li> <li>D4.8 To be able to synthesise knowledge gained from reading and studying scientific documentation.</li> </ul>
--------------------------	---

	<p>Learning skills</p> <ul style="list-style-type: none"> <li>• D5.1 To be able to independently extend the knowledge acquired during the course of study by reading and understanding scientific and technical documentation in English;</li> <li>• D5.3 In the context of a problem solving activity, to be able to extend knowledge, even if incomplete, taking into account the final objective of the project;</li> </ul>
<p><b>Assessment</b></p>	<p>The assessment of the course consists of three parts:</p> <ul style="list-style-type: none"> <li>• a project (50%);</li> <li>• oral presentations during the semester (25%)</li> <li>• a final oral exam (25%).</li> </ul> <p>In case of a positive mark the project will count for all 3 regular exam sessions. The projects have to be delivered at least one week before the final oral exam, otherwise they cannot be assessed, and the exam cannot be registered.</p>
<p><b>Assessment language</b></p>	<p>English</p>
<p><b>Assessment typology</b></p>	<p>Monocratic commission</p>
<p><b>Evaluation criteria and criteria for awarding marks</b></p>	<p>The project (50% of the mark), in which students implements a series of change requests on an existing, large-scale, open-source software project, applying the techniques seen in class. Furthermore, progress is documented with state of the art tools, and periodically presented in class.</p> <p>The project will be assessed based on how students apply the techniques seen in class during the project, and on how their progress is documented. In case of a group project, each student will be evaluated separately.</p> <p>Papers presenting state of the art work in software maintenance and evolution will be assigned to each students during the semester and will be presented in class. They will be assessed based on the understanding of the material presented in the papers, the clarity of the presentation, and the ability to relate it to other topics seen during the course.</p> <p>The final oral exam will be assessed based on the acquired knowledge and the understanding of the material presented during the semesters, the clarity of answers, mastery of language (also with respect to teaching language), and the ability to summarize, evaluate, and establish relationships between topics.</p>
<p><b>Required readings</b></p>	<p>Lecture slides will be made available on the course website.</p> <ul style="list-style-type: none"> <li>• Vaclav Rajlich, Software Engineering: The Current Practice (Chapman &amp; Hall/CRC Innovations in Software Engineering and Software Development Series). ISBN: 1439841225</li> <li>• Research papers will be made available on the course website and assigned to each course participant</li> </ul>

Freie Universität Bozen  
Libera Università di Bolzano  
Universit  Lia di de Bulsan

<b>Supplementary readings</b>	<ul style="list-style-type: none"><li>• Martin Fowler, Refactoring: Improving the Design of Existing Code (Addison-Wesley Professional). ISBN: 0201485672</li></ul> Additional resources will be made available on the course website on an as-needed basis.
<b>Software used</b>	The following list includes the most important tools that we will use in the course: <ul style="list-style-type: none"><li>• Eclipse IDE or IntelliJ IDEA</li><li>• Git</li><li>• Github</li></ul>
