

Syllabus Course description

Course title	Statistics for the Public Sector - M1 Introduction to statistical methods - M2 Economic Statistics
Course code	27066
Scientific sector	SECS-S/01 (M1) - SECS-S/03 (M2)
Degree	Master in Public Policies and Administration LM63
Semester and academic year	1st semester 2023/2024 (M1) – 2nd semester 2023/2024 (M2)
Year	1
Credits	12 (6+6)
Modular	Yes

Total lecturing hours	72 (M1: 36 + M2: 30 J. Ditzen + 6 F. Marta L. Di Lascio)
Total prep course hours	36 Marta Nai Ruscone
Total exercise hours	72 – M1: 36 (<i>Preparatory Course</i>) + 18 (Marta Nai
	Ruscone); M2: 18 (TBA)
Attendance	Recommended, but not required
Prerequisites	Students without a background in statistics are strongly recommended to attend the <i>Preparatory Course</i> in Statistics scheduled at the beginning of the first semester, before Module M1 starts. At the end of the <i>Preparatory Course</i> , students are encouraged to take a test to assess the basic requirements to access Statistics for the Public Sector. Students receiving a "not passed" grade in the preparatory course will be put in contact with the main lecturer to bridge existing knowledge gaps. Students receiving a "pass with distinction" grade in the preparatory course will be awarded an additional point for the final mark in Statistics for the Public Sector.
Course page	https://www.unibz.it/en/faculties/economics- management/master-public-policies-administration/

Specific educational objectives	M1 Introduction to statistical methods The course refers to the educational activities and belongs to the scientific area of Statistics. Upon successful completion of the course students will be able to: - explain how decisions are often based on incomplete information, describe the statistical survey process, distinguish descriptive and inferential statistics; - understand sampling distributions and the implications for statistical inference; know the criteria for constructing good parameter estimators; compute parameter estimates from a data sample; understand the philosophy and scientific
	principles underlying hypothesis testing; carry out hypothesis tests for a variety of statistical problems;

 understand and use inferential statistics for single and multiple samples and to study the relation between response and explanatory variables; conduct meaningful answers to real-world data analysis problem; perform statistical data analysis using the R computing environment.
M2 Economic Statistics This course refers to the educational activities and belongs to the scientific area of Statistics. This course introduces students to the development, implementation, analysis, and reporting of empirical research projects. The focus of the course is on quantitative methods. Emphasis is placed on hands-on exercises in all stages of an empirical research project. Upon completion of this course students should be able to: - develop a data analysis plan based on specified research questions and hypotheses; - prepare the data for analysis; - perform planned and exploratory quantitative analyses using the R statistical software; - present and interpret the results of their analyses.

Module 1	M1 Introduction to statistical methods
Lecturer	Francesco Ravazzolo Office E2.07 e-mail: Francesco.Ravazzolo@unibz.it Tel: +39 0471 013133 https://www.unibz.it/en/faculties/economics- management/academic-staff/person/36066-francesco- ravazzolo
Scientific sector of the lecturer	SECS-P/05
Teaching language	English
Office hours	18 hours MySNS – My timetable Webpage: https://www.unibz.it/en/timetable/?sourceId=unibz&department=26&degree=13543%2C13723
Lecturing assistants	Marta Nai Ruscone Marta.NaiRuscone@unibz.it
Teaching assistant	Not applicable.
List of topics covered	Introduction to decision making under uncertainty Statistical survey and survey design. Random sampling versus systematic sampling. Sampling strategies. Sampling and non sampling errors. Descriptive versus inferential statistics.

	Statistical inference Drawing conclusions about a population from a sample data via probability calculations. Random sampling, sampling distributions and estimation. Estimators and confidence intervals in one-sample and two-sample problems. Statistical decision-making and hypothesis testing for one-sample and two-sample problems. Test of independence.
	Statistical Models Correlation, regression and causation. The simple linear regression model. The multiple regression model and its extensions (including categorical variables, interactions and non-linearity). Inference methods for regression. Analysis of variance and Kruskal-Wallis test.
	R software Exploratory and inferential data analysis and data modelling in R with focus on real examples relevant for the Public Sector.
Teaching format	Frontal lectures, lectures with computers, exercises

Module 2	M2 Economic Statistics
Lecturer 1	Jan Ditzen Office: E5.23 Email: jan.ditzen@unibz.it https://www.unibz.it/en/faculties/economics- management/academic-staff/person/44644-jan-ditzen
Lecturer 2	F. Marta L. Di Lascio Office: E5.10A Email: marta.dilascio@unibz.it https://www.unibz.it/en/faculties/economics- management/academic-staff/person/32845-francesca- marta-lilja-di-lascio
Scientific sector of the lecturer	SECS/S01
Teaching language	English
Office hours	15 hours (J. Ditzen) + 3 hours (F. Marta L. Di Lascio) MySNS – My timetable Webpage: https://www.unibz.it/en/timetable/?sourceId=unibz&department=26&degree=13543%2C13723
Lecturing assistant	TBA
Teaching assistant	Not applicable.
List of topics covered	Introduction into Econometrics The course will introduce students to econometric methods, in particular regression analysis. Students will

learn how to interpret regression results and evaluate their reliability using hypothesis testing.

We will start with a simple univariate linear regression model, followed by multivariate linear regression model. Furthermore, the following topics are covered: Inference, Binary and Dummy Variables, difference between Crosssectional, time series and panel data models.

How to develop an empirical research project

Fundamentals in design of scientific projects. Developing scientific research questions and hypotheses. Research strategies and designs. Types of data and their sources. Setting up a research project with a good literature review. Managing the research workflow: assure reproducibility and methodological transparency; gaining efficiency in the project. Data management and curation, in theory and practice. Presentation standards for scientific findings. Application of the above topics within the R computing environment.

Official statistics and economics

An overview from both the data producer and the data user perspectives.

Teaching format

Frontal lectures, exercises, lectures with computers

Learning outcomes

M1 Introduction to statistical methods

Knowledge and understanding: Knowledge of the basics of the inferential statistical theory, from estimation to hypothesis testing. Knowledge of the procedures for simple and multiple linear statistical modelling. Ability to understand basic R code and implement statistical methods in the R computing environment.

Applying knowledge and understanding: Ability to perform basic statistical analyses of socio-economic data through descriptive and the inferential statistical tools. Ability to apply statistical techniques using a statistical software.

<u>Making judgments</u>: on the appropriateness of statistical tools to analyse data and on the results of a statistical analysis of concrete cases.

<u>Communication skills</u>: to present in a consistent and precise way the results obtained from a statistical analysis of observed data.

<u>Learning skills</u>: Ability to *i)* understand the logic of statistical reasoning, *ii)* address statistical issues concerning concrete

problems, and *iii)* interpret the results of statistical data analysis.

M2 Economic Statistics

Knowledge and understanding: Basics research strategies, designs and methods; Other types of data: opportunities and methodological challenges. The basics of the generalized linear model. Applied multiple regression for continuous and binary dependent variables.

Applying knowledge and understanding: Ability to find existing statistical data relevant to given research topics; Basic abilities to design own data collection projects and to draft a simple questionnaire. Basic abilities in building a statistical model. Basic abilities in the use of R software for data management, analysis and reporting, assuring reproducibility of results.

<u>Making judgments:</u> Ability to choose appropriate research strategies and designs to address a given research question. Ability to assess data quality in terms of both measurement and generalizability issues.

<u>Communication skills:</u> Ability to present in a consistent and precise way the results obtained from the statistical analysis. Ability to write a technical report on specific economic issues by analysing data.

<u>Learning skills:</u> Ability to link theory to empirical research and to translate research hypothesis into empirical studies. Ability to understand and analyse the economic data from a quantitative perspective.

Assessment

M1 Introduction to statistical methods

Final mark is a sum of marks from a group assignment (50%) and a written exam (50%). The students will have to solve theoretical, practical and computational issues concerning concrete problems. For students not turning in the take-home project by the mid-semester deadline, 100% of the final mark in the subject is given by the final exam. The assessment mode indicated is the same for attending and non-attending students.

M2 Economic Statistics

Final written exam: students will have to solve theoretical, practical, and computational issues concerning a given concrete problem showing knowledge and understanding of the covered theories and methods.

Assessment language	English (B1 level is required to enrol)
Evaluation criteria and criteria for awarding marks	M1 Introduction to statistical methods Final mark is a sum of marks from the group assignment and a written exam. The following aspects are relevant for the written exam: correctness and clarity of answers, ability to interpret R outputs in the context of real data and ability to write correct R code.
	M2 Economic Statistics All students must reach a passing grade on the written exam. The following aspects are relevant for the exam: correctness of answers, ability to interpret R outputs and a critical assessment of regression results considering econometric and economic theory.
	Overall course (M1+M2) assessment Passing both the Module 1 and the Module 2 exam is required for passing the (whole) course. The final mark for the whole course (M1 and M2) is computed as the average of the two modules marks.

Required readings	 M1 Introduction to statistical methods P. Newbold, W. L. Carlson, B. M. Thorne, Statistics for Business and Economics – Global Edition, Pearson, New York, 2023, 10th Ed ISBN 978-12-924-3684-5. Chapters 6-15. P. Dalgaard, Introductory Statistics with R, Springer Verlag, New York, 2008, 2nd Ed ISBN: 978-03-877-9053-4. Chapters 1-2,5-8,11-12. Lecture notes and R code of the labs will be provided.
	M2 Economic Statistics - J. M. Wooldridge, <i>Introductory Econometrics: A Modern Approach,</i> Cengage, 6th Ed. ISBN 9781305270107, Chapters 1-10, 13, - Lecture notes and R code will be provided
Supplementary readings	M1 Introduction to statistical methods - D.S. Moore, G.P. McCabe, B.A. Craig, <i>Introduction to the Practice of Statistics</i> , WH Freeman, New York, 2021, 10th Ed ISBN 978-13-192-4444-6. - A. Agresti. Kateri, M. <i>Foundations of Statistics for Data Scientists: With R and Python</i> , Chapman & Hall, 2022, 1st Ed. ISBN: 978-03-677-4845-6.
	M2 Economic Statistics Marno Verbeek, <i>A Guide to Modern Econometrics,</i> Wiley 4th Edition.
