

Syllabus

Course description

Course title	Modern Control
Course code	42412
Scientific sector	ING-INF/04
Degree	Bachelor in Electronics and Cyber-Physical Systems Engineering
Semester	II
Year	II
Academic Year	2023/24
Credits	9
Modular	//

Total lecturing hours	36
Total lab hours	54
Attendance	Recommended
Prerequisites	Lectures and exercises of Mathematical Analysis I and II, Linear Algebra, Physics I, and Physics II
Course page	

Specific educational objectives	The student should understand the basic principles of methods of modern control with focus on state-space control and optimal control and be able to apply them in exercises, but also in laboratory experiments on real hardware.
--	--

Lecturer	
Scientific sector of the lecturer	ING-INF/04 – AUTOMATION
Teaching language	English
Office hours	After consultation and agreement with lecturer
Teaching assistant (if any)	-
Office hours	-
List of topics covered	<ol style="list-style-type: none"> 1. Modelling and system analysis in state space: dynamic system modelling in time domain and state-space representation, dynamic system response derived from state-space representation, stability in state space, steady-state error for systems in state space 2. Control design in state space: pole placement design techniques, controllability, observability, full-state observers 3. Optimal control of dynamic systems: problems with fixed and variable end-points as well as with equality and inequality constraints, maximum principle, Hamilton-Jacobi-Bellmann equation, linear quadratic regulator 4. Laboratory: computer-aided analysis and design using

	Matlab/Simulink, implementation of controllers and experimental evaluation on real-hardware setups
Teaching format	The lessons are divided into i) theoretical classroom lessons, ii) classroom exercises and iii) lab exercises.

Learning outcomes (ILOs)	<p><u>Knowledge and understanding</u> Knowledge and understanding in the field of:</p> <ol style="list-style-type: none"> 1. State-space modelling and control 2. Optimal control <p><u>Applying knowledge and understanding</u></p> <ol style="list-style-type: none"> 3. Ability to apply knowledge for solving given problems, including solving them with numerical data using software packages like Matlab/Simulink and their implementation and evaluation on real hardware setups. <p><u>Making judgements</u></p> <ol style="list-style-type: none"> 4. Ability to judge plausibility of results. <p><u>Communication skills</u></p> <ol style="list-style-type: none"> 5. Maturing of technical-scientific terminology. <p><u>Ability to learn</u></p> <ol style="list-style-type: none"> 6. Learning skills to independently study and apply methods of modern control for specific applications beyond topics covered in this lecture.
---------------------------------	---

Assessment	Formative assessment			
	Form	Length /duration	ILOs assessed	
	In-class exercises	Continuously as part of course-accompanying exercises	1-6	
	Summative assessment			
	Form	%	Length /duration	ILOs assessed
	In-class exercises (Mid-term) *	15	120 minutes	1-6
	Written	60	180 minutes	1-6
	Programming	25	120 minutes	1-6
	* For those students unable to attend the mid-term in-class exercise, the final written exam will account for 75% of the grade.			
Assessment language	English			
Evaluation criteria and criteria for awarding marks	The final exam consists of two parts.			

	<p>The first one will focus on several mathematical tasks to be solved, which are distributed among the main topics covered. Judged will be:</p> <ul style="list-style-type: none"> • the correctness of the approach and the mathematical steps of the solution, the calculation of numerical results; • the correctness of the provided answers and arguments presented and the terminology used. <p>The second part will focus on examining the ability of the student to solve a problem with the help of Matlab and Simulink. The student will have to develop a script and/or Simulink diagram and to deliver them as part of the exam. Judged will be:</p> <ul style="list-style-type: none"> • the correctness of the implementation and achieved simulation results.
