

COURSE DESCRIPTION – ACADEMIC YEAR 2024/2025

Course title	Verification and Reliability
Course code	76096
Scientific sector	INF/01
Degree	Master in Software Engineering (LM-18)
Semester	2
Year	1
Credits	6
Modular	No
Total lecturing hours	40
Total exercise hours	20
Attendance	Not compulsory
Prerequisites	<p>Students are familiar with practices and methods of modern software product development and statistics and are able to develop software programs in autonomy.</p> <p>Pre-requisite material can be taught in the following courses:</p> <ul style="list-style-type: none"> • Contemporary Software Development • Software design and implementation
Course page	https://ole.unibz.it/
Specific educational objectives	<p>The course belongs to the type “caratterizzanti – discipline informatiche”.</p> <p>The course defines principles and practices of verification and reliability of software systems that have dependable characteristics. Verification methods aim at checking that the system meets prescribed software specifications. Reliability aims at observing and predicting the capability of a system to operate according to its specifications over a given period of time. The goal of the course is to prepare the students to recognize the quality characteristics of a system and to develop and maintain a system accordingly.</p>
Lecturer	Barbara Russo
Contact	Via Bruno Buozzi 1, Room B1.4.20, barbara.russo@unibz.it , 0471-016170
Scientific sector of lecturer	INF/01
Teaching language	English
Office hours	By previous appointment via e-mail.
Lecturing Assistant (if any)	Jorge Melegati
Contact LA	jorge.melegati@unibz.it
Office hours LA	TBD
List of topics	<ul style="list-style-type: none"> • Dependable properties of systems • Software and software systems testing • Techniques for verification of software systems • Advances in test design and implementation • Search Based testing • HW and SW reliability and their models
Teaching format	Frontal lectures, exercises, and project development solo or in team.

Learning outcomes

Knowledge and understanding

- D1.2 be able to analyse and solve even complex problems in the area of Software Engineering for Information Systems with particular emphasis on the use of empirical evaluation studies, methods, techniques and technologies;
- D1.3 have an in-depth knowledge of the scientific method of investigation applied to even complex systems and innovative technologies that support information technology and its applications;
- D1.4 have an in-depth knowledge of the principles, structures and use of processing systems for the automation of software systems.

Applying knowledge and understanding

- D2.1 know how to apply the fundamentals of empirical analysis of ICT data for the construction of mathematical models for the evaluation and prediction of characteristics of applications and software systems;
- D2.2 know how to design and carry out experimental analyses of software systems in order to acquire measurements of their behaviour and evaluate experimental hypotheses in different application fields, such as business, industry or research;
- D2.5 ability to extend and modify an existing technical solution or formal model in an original way, taking into account changing conditions, requirements and the evolution of technology.

Making judgments

- D3.1 ability to independently select documentation from various sources, including technical books, digital libraries, technical scientific journals, web portals or open source software and hardware tools;
- D3.5 be able to work with broad autonomy, including taking responsibility for projects and structures.

Communication skills

- D4.1 ability to present the contents of a scientific/technical report in a set time in front of an audience, including non-specialists;
- D4.2 ability to structure and draft scientific and technical descriptive documentation of project activities;
- D4.4 ability to prepare and deliver presentations with technical content in English;
- D4.6 ability to carry out research and projects in a working group;
- D4.7 ability to synthesise knowledge gained from reading and studying scientific and technical documentation and to prepare reports and presentations.

Learning skills

- D5.3 in the context of a problem solving activity, ability to extend even incomplete knowledge with regard to the final objective of the project;
- D5.4 the ability to formulate and validate theories and define new methods by means of empirical induction and new generation scientific investigation tools.

<p>Assessment</p>	<p>Knowledge and understanding The written exam contains exercises and theoretical open questions.</p> <p>Applying knowledge and understanding At the lab, students will be evaluated through the project development on</p> <ol style="list-style-type: none"> 1. Their autonomy and competence in selecting and applying testing techniques on actual software. 2. How they use statistical knowledge for fitting models on data and drawing conclusion out of the resulting findings. 3. How they can design and perform a study on reliability data. <p>Making judgments At the lab, students will be evaluated on</p> <ol style="list-style-type: none"> 1. The ability to apply the techniques for verification and reliability 2. The ability to devise a solution and interpret the results <p>Communication skills At the written exam, students will be evaluated by the appropriate use of the course registry. At the lab, students will be evaluated on their ability to defend their conclusions.</p> <p>Ability to learn At the written exam, students will be evaluated by the level of knowledge acquired on the topics of the course At the lab, students will be evaluated on their ability to apply and develop concepts and tools for verification and reliability of dependable software .</p> <p>The assessment is based on a project evaluation (50%) and a written exam (50%). The project work can be hand in no later than one week before the final exam date. To access the written exam students must have passed (18 or more) the project work. In case the project work assessment is positive but the final written exam is not positive, the assignments grade is valid for all three regular exam sessions.</p>
<p>Assessment language</p>	<p>English</p>
<p>Assessment typology</p>	<p>Non-Monocratic</p>
<p>Evaluation criteria and criteria for awarding marks</p>	<p><i>Final grade: 50% lab assessment + 50% written exam</i> <i>Lab assessment must be positive (i.e., 18 or higher) to access the written exam.</i> <i>Final grade pass: 18 or higher.</i></p> <p>Relevant for the assessment: Lab assessment: ability to apply in autonomy and develop further instruments introduced during the lectures/labs and needed to accomplish tasks and perform little studies with data. Ability to report in a professional manner also using the appropriate terminology and concepts of the course.</p> <p>Written exam: ability to use the appropriate terminology and concepts of the course and to apply them in different context.</p>

	<p>Ability to understand the assumptions under which different techniques/methods can better perform or be used.</p> <p>Ability to analyze a problem and determine the causes.</p> <p>Ability to synthesize the results and interpret them in a specific context also using mathematical instruments to compare and evaluate models shaping software systems in testing or reliability.</p>
<p>Required readings</p>	<p>Lecture notes and papers will be handed out during the course.</p> <p>Main reference for testing: Pezzè & Young, Software Testing and Analysis: Process, Principles and Techniques, Wiley, 2007. University Shelf ST 233 P522 . Chap.1-4, 5-6 8-12 17</p> <p>Main reference for reliability: Lyu, M. (ed.) Handbook of Software Reliability Engineering, IEEE Computer Society Press, 1996 Chapter on SRGM</p> <p>Main reference for Dynamic Systems: Rigdon E.S. and Basu A.P. Statistical methods for the reliability of repairable systems Wiley series in probability and statistics. Chapter 1-3</p> <p>Main reference to review statistic background Baron, M. Probability and Statistics for computer Scientists Chapman and Hall, ISBN: 1584886412 University shelf: 15 ST 340 B265(.07). Chapter 1-3 and chapter 6</p> <p>Subject Librarian: David Gebhardi, David.Gebhardi@unibz.it</p>
<p>Supplementary readings</p>	<ul style="list-style-type: none"> • Laurie Williams et al. http://openseminar.org/se/modules/7/index/screen.do • Kent Beck: Test Driven Development by Example, Addison-Wesley Verlag
<p>Software used</p>	<ul style="list-style-type: none"> • R, Python • Latex • Java • Optional: Software needed for assignments development (e.g., testing frameworks or FindBugs or STRAITS etc...) <p>In case is needed, students will develop their own tools to mine software reliability data</p>
