

COURSE DESCRIPTION – ACADEMIC YEAR 2018/2019

Course title	Temporal and Spatial Databases
Course code	72099
Scientific sector	INF/01
Degree	Master in Computer Science (LM-18)
Semester	1
Year	2
Credits	8
Modular	No
Total lecturing hours	48
Total lab hours	24
Total exercise hours	--
Attendance	Not compulsory
Prerequisites	Students should be familiar with basic concepts in databases (including relational databases, SQL, and relational algebra) and algorithms. This material is taught in the following courses: Database Systems, and Data Structures and Algorithms.
Course page	https://ole.unibz.it/
Specific educational objectives	<p>The course belongs to the type "caratterizzanti – discipline informatiche".</p> <p>Understanding of the basics of temporal and spatial database systems.</p>
Lecturer	Vincenzo Del Fatto and Anton Dignös
Contact	<p>Vincenzo Del Fatto: Piazza Domenicani 3, Room 2.19, vincenzo.delfatto@unibz.it, +39 0471 016255</p> <p>Anton Dignös: Piazza Domenicani 3, Room 2.19, anton.dignoes@unibz.it, +39 0471 016142</p>
Scientific sector of lecturer	INF/01
Teaching language	English
Office hours	Arrange beforehand by email.
Lecturing Assistant (if any)	--
Contact TA	--
Office hours TA	--
Syllabus	<ul style="list-style-type: none"> • Spatial Reference Systems and Geographic Data Format: Raster Data, Vector Data • Modelling Spatial Concepts in Spatial Databases • Spatial indexes • Spatial Analysis • Requirements and motivation for temporal databases • Time domain, granularity, calendars • Abstract and concrete temporal data models • Temporal operators and extensions of SQL
Teaching format	Frontal lectures and labs (exercises). The labs will allow students to get practical experience and apply the concepts learned during the lectures.

<p>Learning outcomes</p>	<p>Knowledge and understanding:</p> <ul style="list-style-type: none"> Know in detail the principles of temporal and spatial database systems and methods for designing and developing temporal and spatial databases. <p>Applying knowledge and understanding:</p> <ul style="list-style-type: none"> Be able to identify new application requirements and business opportunities in the field of systems based on data and knowledge. <p>Making judgments</p> <ul style="list-style-type: none"> Be able to identify reasonable work goals and estimate the resources required to achieve the objectives. <p>Communication skills</p> <ul style="list-style-type: none"> Be able to structure and prepare scientific and technical documentation describing project activities. <p>Learning skills</p> <ul style="list-style-type: none"> Be able, in the context of a problem-solving activity, to extend even incomplete knowledge taking into account the objective of the project.
<p>Assessment</p>	<p>The assessment of the course consists of two parts:</p> <ul style="list-style-type: none"> a single written exam at the end that covers the entire course (50% of the mark); lab assignments which are done during the semester and requires students to solve concrete problems by using methods and technologies taught in the course (50% of the mark). <p>The written exam consists of a set of open questions and multiple-choice questions, and verifies knowledge and understanding of the methods and techniques learned during the course.</p> <p>The lab assignments verify whether the student is able to apply the techniques taught in the course to solve concrete problems.</p>
<p>Assessment language</p>	<p>English</p>
<p>Assessment typology</p>	<p>Monocratic</p>
<p>Evaluation criteria and criteria for awarding marks</p>	<p>A positive overall mark for the assignments is a pre-requisite to be admitted to the written exam; there are no other pre-requisites. Both parts (the written exam and the assignments) must be positive to pass the exam.</p> <p>The final grade is the average of the assignment mark (50%) and the mark of the written exam (50%).</p> <p>Criteria for the evaluation of the assignments and written exam: correctness of the solution and presentation of the solution.</p>
<p>Required readings</p>	<p>Online lecture notes</p>
<p>Supplementary readings</p>	<ul style="list-style-type: none"> C. Bettini, S. Jajodia, X. S. Wang. Time Granularities in Databases. Data Mining, and Temporal Reasoning, chap. 2, Springer-Verlag, July 2000. C. S. Jensen, M. D. Soo, and R. T. Snodgrass. Unification of Temporal Data Models. ICDE 2003, pp. 262-271, 1993.

	<ul style="list-style-type: none"> • M. H. Böhlen, C. S. Jensen. Temporal Data Model and Query Language Concepts. Encyclopedia of Information Systems, Volume 4, Elsevier Science, 2003. • D. Gao, C. S. Jensen, R. T. Snodgrass, and M. D. Soo. Join operations in temporal databases. VLDB Journal, 14:2–29, 2005. • B. Moon, I. F. Vega Lopez, and V. Immanuel. Efficient algorithms for large-scale temporal aggregation. IEEE Transactions on Knowledge and Data Engineering, vol. 15, no. 3, 2004. • Philippe Rigaux, Michel Scholl, Agnès Voisard: Spatial databases - with applications to GIS. Elsevier 2002.
<p>Software used</p>	<p>PostgreSQL with PostGIS, QGIS, PostgreSQL client (psql or pgAdmin) and/or C compiler.</p>
