Pre-Announcement of a Job Opening

Research Associate
“Management and Strategies to Mitigate Global Warming”

position for 1 year
at the Free University of Bozen/Bolzano, South Tyrol, Italy.

I am searching for a highly motivated and capable research associate to support a research project on the development and implementation of strategies and measures to mitigate global warming (2016-2018). The research activity is not about proving and repeating the evidence of man-made climate change (e.g., CO2 or CH4 increase) nor about analyzing its consequences (e.g., sea-level rise, impact on Alpine regions and agriculture). The research centers at (1) analyzing existing and proposed measures to mitigate global warming, (2) conducting surveys and analyzing secondary data, and (3) developing management-theory based counter-strategies at the individual, group, organizational and national level. The project includes independent research work as well as work in a project team.

The ideal candidate holds a graduate degree in Management / Economics (or related social sciences), either thinks about entering a PhD program later on or alternatively is a PhD graduate interested in taking the next scholarly career step and therefore interested in actively searching for subsequent research opportunities and supporting the establishment of a research domain in the advertised field at unibz. S/he speaks English and preferably German and/or Italian and is acquainted with qualitative and/or quantitative research methods (and related software). I am interested in a self-disciplined young researcher, who is willing to fully commit to the Faculty of Economics and Management and to the topic rather than pursuing mainly his or her own agenda.

We offer challenging tasks in an international research project at a young university in one of the most attractive regions in Europe. Based on its research productivity and output, the Faculty of Economics and Management ranks among the top universities in Italy, offering an inspiring environment for research work.

The official job offer and application details will be published in July/August 2017. However, this pre-announcement provides interested young scholars the opportunity to get in contact with me early on in order to foster a well-informed decision for both parties.

I am looking forward to hearing from you.
