**Short Description**

This is a programming course particularly focused on the handling and analysis of big data. Starting from the very basics of programming the students will get to learn the techniques for dealing with large amounts of data, efficient algorithms and data structures. The course is strongly focused on practise, consisting in very short theoretical sessions followed by several examples, exercises and homework. Moreover, the course provides effective graphical and numerical tools to summarize and present information extracted from data. Blockchain and smart contracts are introduced for their innovative potentialities as well as an example of big data to be analysed.

This course gives future professionals in the fintech industry the fundamental skills in this sector, which can be further expanded building on the basis learnt here. To professionals in other industries it offers skills which extend their understanding of the structure and potential use of large datasets.

| Total lecturing hours | 36 |
| Total lab hours       | 0  |
| Total exercise hours  | 0  |

**Attendance**

A continuous and regular attendance is suggested, but not required. Intermittent attendance is strongly discouraged: for non-attending students additional study material which covers the entire course will be available.

**Prerequisites**

English understanding and reading at level B2.
A basic course in computer science covering basic Microsoft Windows, file handling, Internet usage, Excel or a similar data organization program at good level.
Basic descriptive statistics.

**Course page**

www.paolocoletti.it/bigdata

**Specific educational objectives**

The course is designed to acquire programming skill fundamental for the fintech sector and useful even in...
other sectors. An overview of current technology complements the course.

| Lecturer          | Paolo Coletti
|                  | Office E 203
|                  | Paolo.Coletti@unibz.it
|                  | www.paolo.coletti.it
| Scientific sector of the lecturer | ING-INF/05
| Teaching language | English
| Office hours      | please refer to the lecturer's timetable
| Lecturing assistant | none
| Teaching assistant | none
| Office hours      | 18
| List of topics covered | Basic programming, algorithms and data structures for big data, computational complexity. Smart contracts on Ethereum blockchain. Tools and strategies for data analytics.
| Teaching format   | Frontal lectures in standard classroom with examples and exercises. Students use their own notebook or a computer borrowed from the library and then repeat the lesson at home with the help of provided videos and do home exercises, to be repeated in class in front of the colleagues.

| Learning outcomes | Knowledge and understanding
|                  | • knowledge and understanding of data structures for financial, macro-economic and market data
|                  | • knowledge and understanding of algorithms for analysing large amount of data in real time
|                  | • understanding of technical problems when working with big data
|                  | • basic knowledge and understanding of potential uses of smart contracts on blockchain
|                      | Applying knowledge and understanding
|                  | • ability to organize and restructure accounting, financial, organizational, economic and market data
|                  | • ability to summarize and communicate data efficiently
|                  | • ability to use analysis tools to predict trends in financial markets or to perform quantitative analysis of organizational data
|                  | Making judgments
|                  | • ability to choose the adequate tools or techniques when dealing with big data
|                  | • ability to observe and evaluate graphical and statistical representations without being misled
- ability to determine the difficulty level for data handling

**Communication skills**
- ability to communicate efficiently the results of data analyses through graphical representations

**Learning skills**
- ability to use online help systems to further expand program usage

### Assessment

| Assessment | 1. Written assessment on theoretical aspects of the course
|            | 2. Practical assessment on programming and data analytics.
|            | 3. Practical assessment on smart contracts development.
|            | As optional alternative to practical assessment, constant coursework to test student’s skills. |

**Assessment language**
- English

### Evaluation criteria and criteria for awarding marks

- Grade is the weighted average of the assessments. File handling and severe basic computer errors count negatively on the final grade.
- Particular emphasis is given to solutions which are optimal, efficient and extensible.
- Active contributions to the course in class or via email count positively towards the final grade.

### Required readings

- Videos on programming, will be available on [www.paolocoletti.it/bigdata](http://www.paolocoletti.it/bigdata) before the beginning of the course
- Video on Bitcoin and Blockchain technology, available on [www.paolocoletti.it/bigdata](http://www.paolocoletti.it/bigdata)
- Videos on data analytics, will be available on [www.paolocoletti.it/bigdata](http://www.paolocoletti.it/bigdata)
- Data analysis course book, available on [www.paolocoletti.it/bigdata](http://www.paolocoletti.it/bigdata)

### Supplementary readings

- Infographics course book, book available on [www.paolocoletti.it/bigdata](http://www.paolocoletti.it/bigdata)
