

SYLLABUS COURSE DESCRIPTION

COURSE TITLE	Probability Theory and Statistics
COURSE CODE	76210
SCIENTIFIC SECTOR	MAT/06
DEGREE	Bachelor in Computer Science
SEMESTER	1st
YEAR	2nd
CREDITS	6
TOTAL LECTURING HOURS	40
TOTAL LAB HOURS	20
PREREQUISITES	Basic notions of algebra and mathematical analysis
COURSE PAGE	ole.unibz.it
SPECIFIC EDUCATIONAL OBJECTIVES	<ul style="list-style-type: none"> • Type of course: "affini o intergativi" • Scientific area: „formazione affine" <p>The course offers an overview of the theory of probability in connection to its use in computer science and the use of statistics in analysing and understanding empirical data.</p>
LECTURER	Rafael Penaloza
SCIENTIFIC SECTOR OF THE LECTURER	INF/01
TEACHING LANGUAGE	English
OFFICE HOURS	POS 3.05, Wednesday 11.00-13.00, Rafael.Penaloza@unibz.it
TEACHING ASSISTANT	Alisa Kovtunova
OFFICE HOURS	TBA

LIST OF TOPICS COVERED	<ul style="list-style-type: none"> • Discrete probability: finite probability spaces, infinite discrete probability spaces, probability, conditional probability, Bayes's theorem, random variables, discrete distributions • Continuum probability: probability spaces, conditional probability, random variables, distributions, expectations and integration • Independence: independence of random variables, variance and covariance, joint distributions, convolution, conditional expectation • Sums of random variables: random variable manipulations, law of large numbers, central limit theorem, the Monte Carlo method • Descriptive statistics and inference: data analysis, parametric inference, normality, non-parametric inference, bootstrap • Statistical models: hypothesis testing, linear statistical models, regression, least square methods
TEACHING FORMAT	Lectures: chalk and talk; supplemental e-learning activities, Lab: interactive and group work
LEARNING OUTCOMES	<p>Knowledge and understanding</p> <ul style="list-style-type: none"> • Have a solid knowledge of statistics and probability theory; <p>Applying knowledge and understanding</p> <ul style="list-style-type: none"> • Be able to apply the tools of statistics and probability theory to solve information technology issues; <p>Making judgments</p> <ul style="list-style-type: none"> • Ability to discern between various probability models and capability to find appropriate models for a given application; <p>Learning skills</p> <ul style="list-style-type: none"> • Have developed learning capabilities to pursue further studies in statistics and probability theory.
ASSESSMENT	<p>Written final exam with unseen questions about the material covered in the course.</p> <p>The aim of the written exam is to check to which degree students have mastered the following learning outcomes: 1) Knowledge and understanding, 2) applying knowledge and understanding, 3) making judgment.</p>
ASSESSMENT LANGUAGE	English
EVALUATION CRITERIA AND CRITERIA FOR AWARDING MARKS	Correctness and clarity of the answers.
REQUIRED READINGS	<p>C. M. Grinstead and J. L. Snell. Introduction to Probability. American Mathematical Society, 1997.</p> <p>S. M. Ross. Introduction to probability and statistics for engineers and scientists. Elsevier/Academic Press, Amsterdam; Boston, 2004. OCLC: 123752914.</p>
SUPPLEMENTARY READINGS	J. Haigh. Probability models. Springer, London, 2013. OCLC: 909978104.

	W. N. Venables, D. M. Smith, and the R Core Team. An Introduction to R, version 3.3.2 edition, 10 2016. Notes on R: A Programming Environment for Data Analysis and Graphics.
SOFTWARE USED	R as a recommended software, but not required for exam.
