Syllabus
Course description

Course title	Mechanics and Structural Design for Energy Engineering
Course code	45502A - 45502B
Scientific sector	ICAR/08 – ICAR/09
Degree	Master Energy Engineering
Semester	1
Year	2
Academic year	2018/2019
Credits	3 + 3
Modular	Yes

Total lecturing hours	50
Total lab hours	0
Total exercise hours	10
Attendance	Not compulsory
Prerequisites	Students regularly enrolled at the 2nd year of the Master Study Programme in Energy Engineering are allowed to follow this course. For a fruitful attending of the course basic knowledge of solid and structural mechanics is needed. Attendance of the Module 45502A for a fruitful attending of the Module 45502B
Course page	http://www.unibz.it/en/sciencetechnology/progs/master/energy/courses/default.html?year=2

Specific educational objectives	The course investigates good practice in the design of steel structures, presenting requirements, standards and methodologies that have to be followed in order to design efficient yet reliable structures. The students attending this course are expected to learn how to design key components in steel structures to be implemented in systems for energy applications, including wind energy, hydraulic energy, solar energy and bioenergy and relevant industrial plants.

Module 1	Fundamental of Structural Mechanics
Lecturers	Maria Pantano (responsible of the course) Oreste S. Bursi
Scientific sector of the lecturer	ICAR-08 – Scienza delle Costruzioni/Structural Mechanics
Teaching language	English
Office hours	Appointment by email
Teaching assistant ***(if any)***	-
Office hours	-

List of topics covered	Part I: Overview – 6 hours, Oreste S. Bursi- Overview on the applications and benefits of steel and steel structures in energy engineering systems. Examples related to wind energy, hydraulic energy, solar energy and bioenergy and relevant industrial plants. Applications and benefits of steel and steel structures in Energy Engineering. Part II: Material and Analysis – 24 hours, Maria Pantano- Mechanical properties of materials with particular emphasis on steel and concrete. Standards for the design of steel structures according to European rules. Plasticity. Elements of structural dynamics and fatigue. Exercises with theory applications.
Teaching format	Class lectures (blackboard and/or slides). Some of the lecture material (slides) will be available for download by the students.

Module 2	Fundamental of Structural Design
Lecturers	Oreste S. Bursi (responsible of the course) Nicola Tondini
Scientific sector of the lecturer	ICAR/09-Tecnica delle Costruzioni/Structural Design
Teaching language	English
Office hours	Appointment by email
Teaching assistant *(if any)*	Dr. Alessio Bonelli
Office hours	Appointment by email
List of topics covered	Part I: Modern standards and analysis methods – 8 hours, Oreste S. Bursi- Design based on modern national and European standards. Global analysis of structures. Stiffness and strength of elements. Part II: Design of steel structures – 16 hours, Nicola Tondini - Effect of geometrical and mechanical imperfections on the load-bearing capacity of steel elements. Resistance of steel members to tension, compression, bending, shear and combined actions. Buckling resistance of steel members. Stability of steel shell elements. Bolted and welded connections and joints. Design of bolted connections. Worked examples. Part III: Exercises – 6 hours, Alessio Bonelli- Verification of a Wind Turbine Mast.
Teaching format	Class lectures (blackboard and/or slides) and design exercises using spreadsheets. Some of the lecture material (slides) will be available for download by the students

Learning outcomes	<u>Knowledge and understanding</u> 1. Knowledge of the main static and dynamic mechanical

properties of materials and structures, with particular reference to steel, as well as the main technical standards used in steel structural applications.

Applying knowledge and understanding
2. Capability of recognizing where steel and steel structures could be profitably used in energy systems, such as those related to wind, hydraulic or solar energy, and capability of defining requirements in the design of the steel structures for energy applications.

Making judgements
3. The student will be able to assess the validity of the design of an existing steel structure, identify critical aspects and suggest redesign solutions and improvements in both static and dynamic performance.

Communication skills
4. The student will be able to discuss the learned knowledge with vocabulary and technical terms of the discipline, describing efficiently the outcome of the design activity and the features of different solutions.

Learning skills
5. Lifelong learning capability through the acquisition of critical tools and critical evaluation of product and systems specifications.

Assessment

Oral examination with questions aimed at verifying the knowledge and the capability to understand the topics of the course and the mastery of the technical language. The capability to transfer these competences to applicative cases and the developed autonomy of judgment will be evaluated through the discussion of the design work assigned during the course.

Formative assessment

Form	Length/duration	ILOs assessed
Development of the assigned design work	During the course	(2), (3), (5)

Summative assessment

Form	%	Length/duration	ILOs assessed
Oral examination, including discussion of	100	About 1 hour	All, except (5)

	the design work			
Assessment language	English			
Evaluation criteria and criteria for awarding marks	A single final vote will take into account knowledge of the topics presented during the course, ability to synthesize information, correctness of the technical terms and clarity (50 %). With reference to the developed design work, the capability to analyze the proposed problem and to design reliable steel components in structures for energy applications will be taken into account (50 %).			

Required readings	European technical standard: UNI EN 1993-1-1 D. Roylance, Modules in Mechanics of Materials, A web-based collection of educational modules developed under the auspices of the National Science Foundation. MIT course. Davoli et al. "Comportamento meccanico dei materiali", Mc Graw-Hill. Bursi, O.S., Pucinotti, R., Zanon, G., Progettazione di Giunzioni e Strutture Tubolari in Acciaio, Flaccovio, September 2012 | ISBN: 978-88-579-0158-9
Supplementary readings	Cocco, D., Palomba, C., Puddu, P., "Tecnologie delle Energie Rinnovabili", SGEditoriali , Padova, 2010. Battisti, L., Gli Impianti Motori Eolici, Editore L. Battisti , Agosto 2012.
