

## Syllabus

### Course description

<b>Course title</b>	Electric Power Conversion Equipment
<b>Course code</b>	45511
<b>Scientific sector</b>	ING-IND/32
<b>Degree</b>	Master Energy Engineering
<b>Semester</b>	II
<b>Year</b>	1
<b>Academic year</b>	2019/20
<b>Credits</b>	6
<b>Modular</b>	no

<b>Total lecturing hours</b>	36
<b>Total lab hours</b>	24
<b>Total exercise hours</b>	
<b>Attendance</b>	
<b>Prerequisites</b>	Electrotechnics
<b>Course page</b>	<a href="https://www.unibz.it/en/faculties/sciencetechnology/master-energy-engineering/">https://www.unibz.it/en/faculties/sciencetechnology/master-energy-engineering/</a>

<b>Specific educational objectives</b>	<p>The course discusses the theoretical basis and the practical applications of electrical energy conversion (electrical to electrical and electro-mechanical). The main conversion topologies are introduced and studied. Practical aspects and applications will be considered, highlighting the advantages achievable with state-of-the-art technologies. Practical work through laboratory exercises will be organized during the course.</p>
--	---

<b>Lecturer</b>	Dr. Tinazzi Fabio
<b>Scientific sector of the lecturer</b>	ING-IND/32
<b>Teaching language</b>	English
<b>Office hours</b>	Wednesday – 12-14
<b>Teaching assistant (if any)</b>	Dr. Carabin Giovanni
<b>Office hours</b>	
<b>List of topics covered</b>	<p>Static conversion of electrical energy: power electronics components, static conversion principles and applications of static converters, inverter, uninterruptible power systems. Electromechanical energy conversion: nomenclature and characteristics, working principles, fundamentals and applications of DC and AC electrical machines and transformers.</p> <p>Electric drives: generalities of variable speed electric drives, DC and AC motor drives.</p> <p>Practical laboratory experiments on power conversion and</p>

	control using simple digital programmable platforms.
<b>Teaching format</b>	Frontal lectures, exercises in lab
<b>Learning outcomes</b>	<p><b>Knowledge and understanding:</b> Master the most important concepts about electrical energy conversion, understand the design principles of common conversion systems.</p> <p><b>Applying knowledge and understanding:</b> Understanding the main components of actual conversion systems (e.g. multiple stage). Practical experience on simple prototypes.</p> <p><b>Making judgments:</b> Ability to select the more adequate conversion system for a certain application.</p> <p><b>Communication skills:</b> Acquisition of the field-related technical terminology Ability to describe the state-of-the-art of the technology adopted in energy conversion systems. Writing technical reports on laboratory activities.</p> <p><b>Learning skills:</b> Improvement in the ability to autonomously extend the knowledge acquired during the study course, by reading and understanding scientific and technical documentation.</p>
<b>Assessment</b>	<p>The assessment of the course consists of two parts:</p> <ul style="list-style-type: none"> <li>• Lab reports: evaluation of the laboratory reports (homework)</li> <li>• Final practical project: assessed through a project report and an oral presentation with a demo (at the end of the course).</li> </ul> <p>Both parts must be positive for passing the exam. The final grade is the weighted average of the two marks.</p>
<b>Assessment language</b>	English
<b>Evaluation criteria and criteria for awarding marks</b>	<p>The final grade is the weighted average of the marks for final practical project and oral exam. Both parts must be positive.</p> <p>The following aspects will be considering in the evaluation:</p> <ul style="list-style-type: none"> <li>• Lab reports: clarity and correctness of answers, technical language, ability to summarize and evaluate results, presentation quality and ability to understand relationships between different topics</li> <li>• Final practical project: ability to work in a team, problem solving ability, skills in critical thinking, ability to summarize and communicate concepts and to evaluate results.</li> </ul>
<b>Required readings</b>	There is no single textbook covering the entire course content. The material is collected from various sources, which will be announced during the course.
<b>Supplementary readings</b>	<ol style="list-style-type: none"> <li>1. Hart, D. Power electronics McGraw-Hill, 2011</li> <li>2. Hughes, A. Electric motor and drives Elsevier, 2013</li> </ol>
