Total lecturing hours 42 (24 hours TBD, 18 hours C. Di Caterina)
Total lab hours -
Total exercise hours 21
Attendance Suggested, but not required
Prerequisites Attendance of “Statistics”, “Mathematics for Economics” (A and B), and “Financial Analysis” is suggested in order to properly follow these lectures.

Specific educational objectives

The course refers to the complementary educational activities and belongs to the scientific area of Economics.

The course covers the essential tools of econometrics before moving to financial econometrics and empirical finance. It provides a review of the classical linear regression model and focuses on its estimation and interpretation. Financial assets, prices, returns and volatility are subsequently considered and modelled.

Specific educational objectives include:
- Ability to interpret econometric results and draw appropriate conclusions.
- Ability to apply theoretical and empirical models to real world problems.
- Learn specialised statistical/econometric software to perform econometric analysis.
- Ability to efficiently plan and manage independently economic and financial studies.
- Enhance organisational, analytical and communication skills through participation in group project work.

Lecturers Claudia Di Caterina
Office: E5.23

**Learning outcomes**

**Knowledge and understanding**
The aim of the course is to equip students with a working knowledge of important econometric techniques used in international finance and financial economics. Students should be able to correctly specify, estimate and test the econometric models and to interpret properly results from the undertaken analyses.

**Applying knowledge and understanding**
Ability to perform econometric analysis. Students know how to use essential tools for working with economic and financial data. Ability to perform all the mentioned econometric techniques by using appropriate software.

**Making judgments**
Ability to formulate models and to implement appropriate econometric tools for both the analysis and the forecasting of financial data.

**Communication skills**
Ability to present in a consistent and precise manner the results obtained from the econometric analysis.

**Learning skills**
### Ability to understand and analyze financial data from a quantitative perspective.

### Assessment

Final exam and an optional assignment. The final exam consists in two parts:
- the first one includes review questions to test theoretical knowledge and understanding;
- the second one covers empirical aspects and it is aimed at testing applied skills.

The optional assignment is carried out in groups during the semester and foresees a final formal (group) presentation about methods adopted and models developed.

**NOTE:** Project assignments are valid for 1 academic year and cannot be carried over beyond that time-frame.

### Assessment language

English

### Evaluation criteria and criteria for awarding marks

Final grade is determined by the written exam, which can be increased by the extra top-up marks obtained from the optional assignment.

The purpose of the exam is to ascertain that students acquire the knowledge required to correctly use the econometric tools discussed during the lectures and possess the ability to properly interpret the results provided by these procedures.

The assignment also tests students’ ability to
- work in team
- collect and process data
- make critical comparisons and judgements
- undertake effective quantitative problem-solving
- deliver technical presentations.

### Required readings

### Supplementary readings
