<b>List of topics covered</b>	Recording business transactions, adjusting and closing process, merchandising operations, inventory, cash management, receivables, fixed assets, liabilities, equity and investments, statement of cash flows, basic financial statement analysis.
<b>Teaching format</b>	<p>This course is structured in Lectures and Tutorials (EXERCISE).</p> <p>During the Lectures the learning objectives are approached from a conceptual point of view. The important matters of each topic are explained and discussed. Students are expected to familiarize with the literature related with the related Lecture. The Lectures will combine in-class explanation of the background material, problem-solving and case discussions.</p> <p>The Tutorials focus on developing skills to solve financial accounting exercises. The problem-solving competence of the students is stimulated and trained through working out numerical applications. Students are suggested to have read the assigned problems in advance and attempted to work out the solution before coming to a Tutorial. This allows for a more efficient use of class time to cover only the more complex issues and to apply the theoretical concepts to realistic situations.</p>
