

## Syllabus

### Course description

<b>Course title</b>	<b>Preparatory Course in Mathematics – Mathematics for Economists</b>
<b>Course code</b>	99999
<b>Scientific sector</b>	SECS-S/06
<b>Degree</b>	
<b>Semester and academic year</b>	23.08.2021 – 03.09.2021
<b>Year</b>	1st year
<b>Credits</b>	-
<b>Modular</b>	No
<b>Total lecturing hours</b>	30 Group A and 30 Group B
<b>Total lab hours</b>	-
<b>Total exercise hours</b>	-
<b>Attendance</b>	recommended, but not required
<b>Prerequisites</b>	not required
<b>Specific educational objectives</b>	<p>The course refers to the educational activities chosen by the student and belongs to the scientific area of Statistics -Mathematics.</p> <p>The course gives a general overview of Precalculus Mathematics, which prepares for the Mathematics for Economists course. The course is directed to 1<sup>st</sup> year students who are going to attend the Mathematics for Economists course.</p> <p>Educational objectives:  (1) Refresh mathematical knowledge taught in high school, fill gaps and add a few new insights.  (2) Motivate to experience and communicate (about) Mathematics.</p>

<b>Lecturer</b>	Dr. Michael Krueger Office E310 <a href="mailto:michael.krueger@unibz.it">michael.krueger@unibz.it</a> Tel.: +39 0471 013278/013279 <a href="https://www.unibz.it/en/faculties/economics-management/academic-staff/">https://www.unibz.it/en/faculties/economics-management/academic-staff/</a>
<b>Scientific sector of the lecturer</b>	SECS-S/06
<b>Teaching language</b>	English
<b>Office hours</b>	-
<b>Lecturing assistant</b>	-
<b>Teaching assistant</b>	-
<b>Office hours</b>	-
<b>List of topics covered</b>	<ol style="list-style-type: none"> <li>1. Getting acquainted: history of mathematics – a sketch. Some problems in mathematics. Modern Mathematical reasoning: sets and logic.</li> <li>2. Natural, Integer, Rational, Irrational, Real Numbers. Some operations: addition, subtraction, multiplication and division, roots, powers. Absolute values.</li> <li>3. Elementary algebra. Commutativity, associativity, neutral and inverse elements. Distributivity. Polynomials terms of second and third degree. Factorization of a polynomial.</li> <li>4. Real functions. Graph of a real function. Operations with some elementary functions: constant, linear, quadratic, and</li> </ol>

	<p>cubic functions.</p> <ol style="list-style-type: none"> <li>5. Exponentials and logarithms, powers and exponentials, Euler's number <math>e</math> and logarithms. Equations and inequalities.</li> <li>6. Simultaneous equations. Existence of solutions. Exponential and logarithmic equations and inequalities.</li> <li>7. Functions - advanced. Composition of functions. Inverse functions. Symmetries of a function. Examples.</li> <li>8. Sequencies and series: Elementary properties.</li> <li>9. Elements of Linear Algebra, vectors and matrices.</li> </ol>
<b>Teaching format</b>	Lectures and exercises.
<b>Learning outcomes</b>	<p><b><u>Knowledge and understanding:</u></b> Basic mathematical knowledge will be revised and consolidated, and operations with elementary solution procedures will be studied.</p> <p><b><u>Applying knowledge and understanding:</u></b> By elementary examples from economic theory, a basic understanding for the necessity of mathematical modeling in economics is aimed for.</p> <p><b><u>Making judgments:</u></b> The ability to make fundamental distinctions in Mathematics (linear vs. nonlinear, first order vs. higher order etc.) is aimed for. Moreover, a first intuition for quantitative vs. qualitative models should be provided.</p> <p><b><u>Communication skills:</u></b> Basic abilities to apply a mathematical language in an economical framework will be aimed for. The students will be encouraged to discuss aspects of mathematical constructions.</p> <p><b><u>Learning skills:</u></b> Preparation for the Mathematics for Economists course.</p>
<b>Assessment</b>	Only informal assessment.
<b>Assessment language</b>	English
<b>Evaluation criteria and criteria for awarding marks</b>	No marks/grades.
<b>Recommended reading</b>	Sydsaeter, K./Hammond, P., Essential Mathematics for Economic Analysis, 2. edition, Prentice Hall 2006, Chapters 1 - 5
