

## COURSE DESCRIPTION – ACADEMIC YEAR 2022/2023

<b>Course title</b>	<b>Artificial Intelligence</b>
<b>Course code</b>	73054
<b>Scientific sector</b>	INF/01
<b>Degree</b>	Master in Computational Data Science (LM-18)
<b>Semester</b>	2
<b>Year</b>	1
<b>Credits</b>	6
<b>Modular</b>	No

<b>Total lecturing hours</b>	40
<b>Total lab hours</b>	20
<b>Attendance</b>	<p>The course requires an active participation in the form of timely delivery of assignments, in-class discussion, and presentations. These activities constitute a relevant part of the assessment and must be completed within the required time frames.</p> <p>Most of the work is organised in groups and non-attending students are encouraged to collaborate with attending colleagues to coordinate their contributions.</p>
<b>Prerequisites</b>	<p>The course requires a good programming skills (the language used will be Python) as well as a general Computer Science BSc background covering at least: discrete math or logic, basic probability theory, and search based AI techniques (e.g. A*, breadth/depth search, local/greedy search).</p>
<b>Course page</b>	<a href="https://ole.unibz.it/">https://ole.unibz.it/</a>

<b>Specific educational objectives</b>	<p>The course belongs to the type "caratterizzanti – discipline informatiche".</p> <p>The course will introduce the student to different AI techniques to support human decision making in complex domains, and to build autonomous systems.</p> <p>The main part of the course will be devoted to the design and development of software, using the introduced AI methods, to solve proposed challenges. The purpose of this active participation is to gain a better understanding of different approaches to AI, and to focus the course on the more problematic aspects emerging from the application of the taught concepts.</p> <p>The general aim of the course is to provide the student with a toolbox of computational instruments and methodologies enabling the tackling of a variety of practical problems. The hands-on approach will complement the understanding of the main concepts with the necessary know-how to deploy concrete solutions.</p>

<b>Lecturer</b>	<a href="http://www.inf.unibz.it/~stessariz">Sergio Tessaris, www.inf.unibz.it/~stessariz</a>
<b>Contact</b>	POS building room 2.04, <a href="mailto:tessariz@inf.unibz.it">tessariz@inf.unibz.it</a> , +39 0471 016 125
<b>Scientific sector of lecturer</b>	INF/01
<b>Teaching language</b>	English

<b>Office hours</b>	Check the home page of the lecturer for details
<b>Lecturing Assistant (if any)</b>	--
<b>Contact LA</b>	--
<b>Office hours LA</b>	--
<b>List of topics</b>	<ul style="list-style-type: none"> <li>• AI and data/information processing, historical perspective and state of the art</li> <li>• Overview of main AI techniques: exact and approximate methods, handling imperfect information, use and model domain knowledge</li> <li>• Tools and systems for AI based programming</li> <li>• Short projects on AI topics, such as: natural language processing, information extraction, games, automated planning, applications of constraint solving</li> </ul>
<b>Teaching format</b>	Frontal lectures, interactive lab sessions, and project assignments (partially carried out during lab sessions).
<b>Learning outcomes</b>	<p>Knowledge and understanding:</p> <ul style="list-style-type: none"> <li>• D1.1 - Knowledge of the key concepts and technologies of data science disciplines</li> <li>• D1.7 - Knowledge of artificial intelligence techniques and methods for the implementation of intelligent systems</li> </ul> <p>Applying knowledge and understanding:</p> <ul style="list-style-type: none"> <li>• D2.2 - Ability to address and solve a problem using scientific methods</li> <li>• D2.11 - Ability to develop intelligent software systems for decision support</li> </ul> <p>Making judgments</p> <ul style="list-style-type: none"> <li>• D3.2 - Ability to autonomously select the documentation (in the form of books, web, magazines, etc.) needed to keep up to date in a given sector</li> </ul> <p>Communication skills</p> <ul style="list-style-type: none"> <li>• D4.1 - Ability to use English at an advanced level with particular reference to disciplinary terminology.</li> <li>• D4.3 - Ability to structure and draft scientific and technical documentation</li> <li>• D4.5 - Ability to interact and collaborate in the implementation of a project or research with peers and experts</li> </ul> <p>Learning skills</p> <ul style="list-style-type: none"> <li>• D5.1 - Ability to autonomously extend the knowledge acquired during the study course.</li> <li>• D5.2 - Ability to autonomously keep oneself up to date with the developments of the most important areas of data science.</li> <li>• D5.3 - Ability to deal with problems in a systematic and creative way and to appropriate problem solving techniques.</li> </ul>
<b>Assessment</b>	The assessment is based on 1) <i>lab assignments</i> and an in depth 2) <i>final oral presentation</i> on a specific topic among the ones covered in the course.

	<ol style="list-style-type: none"> <li>1. Lab assignments should be carried out in groups of 2 or 3 students; members of the groups should be the same for the whole duration of the course and must be agreed among the participants during the first week of the course. Students joining the course after the first week should arrange their membership within one of the existing groups, or create a new group in the case of several late enrolments.</li> <li>2. For the final presentation, each student should select one of the topics presented during the course and present technical aspects of it that have not been covered (e.g. specific state of the art techniques, or applications). This activity requires independent study, selection of appropriate additional literature and/or material, and the delivery of a coherent presentation outlining the key aspects with the necessary support material (e.g. slides and/or multimedia).</li> </ol> <p>The same assessment applies to non-attending students.</p>
<b>Assessment language</b>	English
<b>Assessment Typology</b>	Monocratic
<b>Evaluation criteria and criteria for awarding marks</b>	<p>Evaluation of the course is based on 2 parts:</p> <ol style="list-style-type: none"> <li>1. Lab assignments (60%), group based assessment based on: original contribution, technical quality of the deliverables, documentation and presentation, and ability to work in a team.</li> <li>2. Oral presentation (40%), individual assessment based on: ability to: independently deepening the knowledge on a specific topic, summarise the relevant information, and establish relationships between different topics; as well as the clarity of the presentation.</li> </ol> <p>Each assignment will be separately evaluated and the overall assessment for the labs will be the average among them. If one assignment is not handed in within the required deadline it will count as 0.</p> <p>The evaluation of the lab assignments to be at least 50% of the available marking is a prerequisite for the admission to the oral presentation. The topic for the oral presentation should be agreed with the lecturer and must be coherent with the syllabus of the course.</p>
<b>Required readings</b>	<ul style="list-style-type: none"> <li>• Stuart Russell, Peter Norvig. Artificial Intelligence: A Modern Approach (3rd edition). Prentice Hall (Dec 2009)</li> </ul> <p>Subject Librarian: David Gebhardi, <a href="mailto:David.Gebhardi@unibz.it">David.Gebhardi@unibz.it</a></p>
<b>Supplementary readings</b>	<ul style="list-style-type: none"> <li>• Luger, George F. Artificial Intelligence: Structures and Strategies for Complex Problem Solving. 6th ed. Boston: Pearson Addison-Wesley, 2009.</li> </ul> <p>Additional material covering specific topics could be provided during the course.</p>

### Software used

The course will require extensive use of publicly available software tools. Most of the programming will be done using Python and the domain-specific languages (DSL) required to use the tools.

The required software will be made available on a Linux based virtual machine, and details will be provided for installing them on your own PC (support will be limited to Linux).
