## Syllabus

### Course title
Design and Manufacturing of Industrial Products

### Course code
47552

### Scientific sector
ING-IND/16 + ING-IND/15

### Degree
Master Industrial Mechanical Engineering LM-33

### Semester
1st

### Year
1st

### Academic Year
2022-2023

### Credits
10 ECTS

### Modular
Yes

### Total lecturing hours
<table>

### Attendance
Recommended

### Prerequisites
None

### Course page

### Specific educational objectives

The course is part of characterizing activities for engineering studies, and it is part of the curriculum of study of the Master in Industrial Engineering. The combination of theoretical findings and practical activities enables both the strengthening of students' scientific background and the acquisition of valuable professional skills.

**Module 1** aims to furnish a general overview of the most important advanced technologies and manufacturing systems. At the end of the course, the student will be able to face a manufacturing problem deciding how to process and manage a product and choosing the suitable manufacturing technology (in particular with a focus on some specific advanced technologies such as Unconventional Machining or Laser).

**Module 2** addresses the fundamentals of methods and techniques to support engineering design processes, by focusing on the opportunities provided by Reverse Engineering and Rapid Prototyping.

The contents of the teaching are characterizing for the students of the M.Sc. course. Students will achieve first a global understanding of product development processes. Then, the course will clarify the design phases and the circumstances in which Reverse Engineering and Rapid Prototyping are the most
advantageous. The major families of Additive Manufacturing technologies will be presented; their orientation towards prototyping and/or manufacturing of end products will be dealt with. Students will have the opportunity to experience available tools in a lab setting. The combination of theoretical findings and practical activities enables both the strengthening of students’ scientific background and the acquisition of valuable professional skills.

### Module 1

**Advanced Manufacturing Technologies and Systems**

<table>
<thead>
<tr>
<th>Lecturer</th>
<th>Cristian Cappellini</th>
<th><a href="mailto:cristian.cappellini@unibz.it">cristian.cappellini@unibz.it</a></th>

<tr>
<td>Teaching language</td>
<td>English</td>
<td></td>
</tr>
<tr>
<td>Office hours</td>
<td>Upon appointment to be agreed through email</td>
<td></td>
</tr>
</tbody>
</table>

**List of topics covered**

- Introduction to manufacturing,
- CNC evolution,
- Manufacturing systems,
- Introduction to Industry 4.0,
- Hydroforming and Sheet incremental forming,
- Laser,
- Plasma Arc Machining,
- Electron Arc Machining,
- Ion Beam Machining,
- Electrical Discharge Machining,
- Water Jet Machining,
- Ultrasonic Machining,
- DFMA

**Teaching format**

Frontal lectures, exercises, case studies, group work (laptops are required for group work)

### Module 2

**Reverse Engineering and Rapid Prototyping**

<table>

</tbody>
</table>

**List of topics covered (Module 2)**

- Introduction to the Engineering Design process and CAD
- Reverse Engineering and 3D scanning
  - Common objectives
  - Existing technologies
  - Contact systems
  - Active non-contact systems
  - Manipulation of acquired data
Interface between Reverse Engineering and Computer-Aided Design systems

- Additive Manufacturing technologies
  - Vat Photopolimerization, Stereolitography (SLA)
  - Material Extrusion, Fused Deposition Modelling (FDM)
  - Powder Bed Fusion
  - Directed Energy Deposition
  - Material Jetting
  - Binder Jetting
  - Sheet Lamination

**Teaching format**

The module is based on frontal lectures, classroom and laboratory activities. Excursions and/or expert speeches are foreseen aimed to interact with industrial subjects, especially South Tyrolean companies, relevant for the course topics, e.g. 3D scanners and printers.

The topics of the module are reported in the provided lecture notes, as well as in the textbooks of the bibliography and some scientific articles. Before each lecture, the corresponding .pdf presentation will be uploaded.

The lecturer can be contacted by students for questions and clarifications by appointment. Discussion during lectures is fostered.

**Learning outcomes**

**Intended Learning Outcomes (ILO)**

**Module 1**

**Knowledge and understanding**

1. This module provides bases and opportunities to originally develop and/or apply knowledge and ideas both in a manufacturing and in a research context.

**Applying knowledge and understanding**

2. Knowledge provided by the lessons will be applied in the development of a project connected to the studied technologies.

**Making judgements**

3. This module provides the ability to integrate knowledge and handle complexity, and to formulate global judgements as well as specific technologic analysis, evaluating the most suitable production cycle also for complex parts by using advanced technologies.

**Communication skills**
4. This module provides the ability for the students to work in group and communicate these conclusions both to specialist and non-specialist audiences.

Ability to learn

5. All the arguments are presented and discussed during the lectures. The study is autonomous and the students will have the possibility to discuss the achieved knowledge in the development of team course project.

Module 2

Knowledge and understanding

Students will

i. acquire basic knowledge about the main objectives pursued by Reverse Engineering and Rapid Prototyping tools;

ii. understand the main differences, pros and cons of the alternative technologies to carry out design tasks supported by 3D-printing devices targeting Rapid Prototyping

iii. acquire knowledge about some important Additive Manufacturing processes;

iv. be able to identify the advantages and limitations of Reverse Engineering and Additive Manufacturing processes in the overall context of design, manufacturing and industrial engineering.

Applying knowledge and understanding

Students will have the chance to apply their knowledge to master processes involving Reverse Engineering, Rapid Prototyping and modelling techniques with a hands-on approach.

Making judgments

Students will be able to compare the existing tools that have been developed for 3D scanning and Rapid Prototyping. They will develop critical capabilities about the pros and cons regarding said instruments. In addition, they will be able to explain alternative strategies for achieving the results obtained through Reverse Engineering and Rapid Prototyping within engineering design.

Communication skills

Students will have the ability to properly discuss the fundamentals of Reverse Engineering and Rapid Prototyping.

Ability to learn

Students will be able to combine the knowledge acquired
during the course with respect to the theoretical background of the teaching, the experience gathered by means of lab tests and notions about trends in the field, gained through the recent literature in the domain. Students will have the opportunity to extend the knowledge of the topics of the course by consulting scientific literature, specialized texts, practitioners’ materials or websites that the lecturer will suggest during the course.

### Assessment

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Written exam*</td>
<td>4 hours available to students</td>
<td>8-18</td>
</tr>
</tbody>
</table>

**Formative assessment**

The group exercises in the classroom and in the laboratory through hands-on experiments, conversations with the lecturer and the performance in specific tasks would enable the assessment and evaluation of the students’ ability to apply their knowledge and understanding of the topics (2.) covered during the course, as well as their achieved communication skills (4.).

**Summative assessment**

The final exam consists in a written test, which mainly assesses the knowledge and understanding of the topics of the course (1.). Specific questions and exercises are tailored to assess students’ capabilities to make judgements and selections (3.), their learning skills (5.), as well as their understanding of the objectives of the practical activities (2.). To this respect, details are found in “Evaluation criteria” below.

*In case an in-presence exam cannot be held due to "force majeure" such as COVID-19 restrictions, the module leader reserves the right to hold an oral exam instead of the written exam.

### Assessment language

English

### Evaluation criteria and criteria for awarding marks

| Module 1 | Oral exam (50%) and project report presentation (50%) |
Relevant for oral exam: clarity of answers, ability to summarize, evaluate, and establish relationships between topics, use of drawing and scheme of the processes;
Relevant for project: ability to work in a team, creativity, skills in critical thinking, ability to identify new solutions using the described technologies

Module 2
The evaluation criteria of the exam are tailored to test the knowledge of the topics of the course, the clarity of the answers and the appropriateness of the language of the student, the pertinence and the relevance of the response and the autonomy of judgment, as well the capability of critically selecting alternatives for product development. Specific questions will aim to assess the ability of the student to present, communicate and discuss the detailed design phase of engineering design cycles, by favorably implementing Reverse Engineering and Rapid Prototyping techniques. Other questions will verify the student’s comprehension of the main practical issues emerged during practical activities, for instance the motivations behind the need to perform auxiliary functions to the scope of successful 3D scanning and printing operations. Additional exercises will be oriented to the evaluation of the skills concerning making of judgements, by proposing potential industrial problems and asking for the most appropriate technologies that might aid in the overcoming of said problems.
In the written test, the points achievable by positively completing each exercises and answering each question will be clearly indicated. Points might be subtracted if the quality of the language will be not considered satisfactory, with specific reference to the terms characterizing the teaching.

Please note that the final mark for the course "Design and Manufacturing of Industrial Products" will be the average of the marks achieved in the modules "Reverse Engineering and Rapid Prototyping“ and "Advanced Manufacturing Technologies and Systems”

### Required readings
- Slides of the course
- The course material is mainly collected from research papers and web notes.
