Syllabus

Course title
The advanced course in Macroeconomics and Industrial Organization is designed to teach students to apply economic tools in their business decisions.

In the module on Macroeconomics students will learn about the mechanisms behind the very large differences in income per capita and output per worker across countries that we are observing today. The students will also learn how agents behave in a rational expectation setting and how they react to government interventions. An insight about the effectiveness of government policies in promoting economic growth will also be studied.

In the module on Industrial Organization, students will learn the consequences of asymmetric information on product markets and on corporate finance, the sources of market power, the origins and welfare effects of network externalities and complement products. A part of the course will then be devoted to Competition Law and Economics.

Finally, students will be exposed to the frontier of research in Industrial Organization, with the analysis of the economics of ICT and platforms. Throughout the course, students will spend a lot of time understanding the issues of measurement of the impact of economic policies – one of the most prominent notions in contemporary economics.

</tr>
<tr>
<td>Specific educational objectives</td>
<td>The course refers to the typical educational activities and belongs to the scientific area of Economics. The course gives a general overview of the topics of macroeconomics + Industrial Organization relevant for decision makers and consultants in Management, Accounting and Finance. The course is designed to teach students to apply economic tools in their business decisions. Students will learn how to think in terms of incentives and choices under constraints.</td>

List of topics covered

Basic principles of Industrial Economics: Industrial Organization and Competitive Strategy.
The course will cover the following topics:
1) Basic definition and models
2) Theoretical interpretation: the evolutionary view
3) Stylized facts in industrial dynamics
4) Growth dynamics
5) Productivity dynamics
6) Firm demography
7) Mergers and acquisitions
8) Monopolistic competition
9) Collusion

Teaching format

Frontal lectures, discussions and group presentations with discussion.

Learning outcomes

Knowledge and understanding:
- Fundamental knowledge of general macroeconomic models applied to economic problems
- Fundamental knowledge of how the behaviour of households, firms, and governments interact and connect to aggregate economic outcomes.
- Fundamental knowledge of how macroeconomic models can be brought to the data.
- Fundamental knowledge of general price theory
- Fundamental knowledge of general microeconomic models applied to economic problems
- Knowledge and understanding of main industrial dynamics
- Ability to read and understand scientific paper about industrial dynamics

Applying knowledge and understanding:
- Ability to think like an economist, that is, using the economists’ criteria and categories
- Ability to grasp the interaction between individual choices (by individuals, firms, central bank, governments) and outcomes
- Ability to apply incentive theory to the relation between incentives and consumers’ and firms’ choices
- Ability to analyze the effects of different economic and fiscal policy choices on the trend of macroeconomic variables
- Making judgments on the basis of appropriate models and tools to analyze specific economic situations and problems.
- Employ marginal analysis for decision making
- Apply choice under constraint models to analyze real business decisions
- Ability to understand scientific literature about industrial economics
- Ability to chose the right theoretical framework to understand the stylized facts

Making judgments:
- Ability to assess economic situations, to relate them to concrete problems, and to develop policy recommendations.
- Ability to use the appropriate methods to identify the chain of causality in an economic problem.
- Ability to measure relevant economic magnitudes consistently.
- Ability to position empirical cases and data into the right theoretical framework

Communication skills:
- Ability to present methodology, scientific papers and theory in a consistent way.
- Ability to discuss economic issues.

Learning skills:
- The student should have a broad understanding of the economic principles that are important for business management. She/he should be able to apply essential elements of core business principles to (case studies of) the business environment.

Communication skills:
- Students should be able to communicate the content, the key concepts, ideas, and their solutions to the problems to both a specialist and a non-specialist audience.

### Assessment

The assessment takes into consideration the combined acquisition of the learning outcome reached by the students in the two modules. Over the course, students are expected to participate to class discussion based on readings and topic assigned in advance. They are also given a written final exam, project works, and oral presentations.

### Assessment language

M1 English, M2 English

### Evaluation criteria and criteria for awarding marks

The final grade will be the arithmetic average of the grades in M1 and in M2.

For M1: For attending and non-attending students: individual written final exam 100%.
### Required readings

**For M1:**

**For M2:**

**Supplementary readings**

Slides and handouts will be distributed on OLE. Additional literature will be indicated during the lectures.
