**Attendance**

Attendance is not compulsory, but non-attending students have to contact the lecturer at the start of the course to agree on the modalities of the independent study.

**Prerequisites**

Basic knowledge of software engineering activities and processes, open mindset and willingness to work under uncertainty.

**Course page**

MS Teams

**Specific educational objectives**

The course belongs to the type "caratterizzanti – discipline informatiche".

The Agile Software Development course intends to instill into future software engineers an agile mentality, and to improve their capabilities of working on software development projects in an agile manner. The main educational objectives are:
- Understanding the root and essence of agile software development and different agile approaches
- Applying key agile engineering and project management practices in software development projects
- Improving teamwork using agile approaches
- Scaling agile software development beyond agile home ground, including distributed and large software development projects.

**Lecturer**

Xiaofeng Wang

Contact LA

Ser I 1.07, xiaofeng.wang@unibz.it, +39 0471 016181

**Scientific sector of lecturer**

INF/01

**Teaching language**

English

**Office hours**

During the lecture time span, Fridays 16:00 - 18:00, arrange beforehand by email.

**Lecturing Assistant (if any)**

Dron Khanna

Contact LA

Ser I 1.07, dron.khanna@unibz.it

**Office hours LA**

During the lecture time span, Fridays 16:00 - 18:00, arrange beforehand by email.

**List of topics**

- Origin and evolution of agile software development and modern agile
- Major agile frameworks and hybrid approaches
- Key agile engineering and project management practices
Teaching format

People-centric and teamwork in agile software development
Continuous experimentation using agile approaches
Scaling agile: distributed and/or large agile software development projects

Learning outcomes

Knowledge and understanding:
D1.5 To know the fundamentals, techniques and methods of design, customization and implementation of software to support the automation of new generation information systems for industrial production and business;
D1.6 To understand the elements of corporate and professional culture.

Applying knowledge and understanding:
D2.4 To be able to define an innovative technical solution to an application problem that meets technical, functional and organisational constraints and requirements.

Making judgments:
D3.2 To be able to plan and re-plan a technical project activity and to carry it out in accordance with defined deadlines and objectives;
D3.3 To be able to define work objectives compatible with the time and resources available;
D3.4 To be able to reconcile the objectives of the project that are in conflict, to trade-off cost, resources, time, knowledge or risk;
D3.5 To be able to work with large autonomy, also assuming responsibility for projects and structures.

Communication skills:
D4.4 To be able to prepare and conduct technical presentations in English;
D4.5 To be able to interact and collaborate during the implementation of a project or research with peers and experts.

Learning skills:
D5.3 In the context of a problem-solving activity, to be able to extend knowledge, even if incomplete, taking into account the final objective of the project.

Assessment

Exam type for regularly attending students:

- Project work (50% of the final mark): applying agile approaches in a software development project (team score);
- Oral exam (50% of the final mark): to test the understanding of theories and knowledge application skills, and verification of project results (individual score).

Note: Positive project result is necessary to attend the oral exam. Both parts of the results must be positive to pass the exam. In case of a positive mark, the project will count for all 3 regular exam sessions.
Exam type for non-attending students:

- Project work (70% of the final mark): applying the learnt agile knowledge to analyse an existing software development project;
- Oral exam (30% of the final mark): to test the understanding of theories and knowledge application skills, and verification of project results.

*Note: Positive project result is necessary to attend the oral exam. Both parts of the results must be positive to pass the exam. In case of a positive mark, the project will count for all 3 regular exam sessions.*

**Evaluation criteria and criteria for awarding marks**

**For attending students:**
- Evaluation criteria for project work:
  - effective application of agile knowledge
  - good teamwork
  - quality of developed solution
- Evaluation criteria for oral exam:
  - ability to summarize, evaluate, and make connections between various topics
  - clarity of answers

**For non-attending students:**
- Evaluation criteria for project work:
  - effective application of agile knowledge
  - quality of the analysis
- Evaluation criteria for oral exam:
  - ability to summarize, evaluate, and make connections between various topics
  - clarity of answers

**Required readings**
- Agile Essentials on Agile Alliance website: [https://www.agilealliance.org/agile-essentials/](https://www.agilealliance.org/agile-essentials/)
- Modern Agile: [https://modernagile.org/](https://modernagile.org/)
- Subject Librarian: David Gebhardi, David.Gebhardi@unibz.it

**Supplementary readings**
- Research papers on agile software development, which will be distributed during the lectures

**Software used**
- Based on types of projects, decided by project teams
