**Specific educational objectives**

The course belongs to the type “attività formative caratterizzanti” scientific area “Informatica”.

The course provides a general overview of scientific content. It aims to expose students to a seminar-based overview of advanced subjects on the edge of research in Software Engineering. The course will introduce the topics, provide recent research samples, and stimulate discussion by letting students read scientific papers, elaborate on the content, and deliver presentations.

**Lecturer**

Ilenia Fronza

**Contact LA**

Via Cassa di Risparmio 21, Room 1.06, Ilenia.Fronza@unibz.it

**Scientific sector of lecturer**

INF/01

**Teaching language**

English

**Office hours**

During the lecture time span, Thursday 14:00 - 15:00, arrange beforehand by email

**Lecturing Assistant (if any)**

- **Contact LA**

- **Office hours LA**

**List of topics**

- Responsible Software Engineering
- AI and Software Engineering
- Remote/Hybrid Software Engineering

**Teaching format**

Frontal lectures, hands-on activity, and discussion.

**Learning outcomes**

Knowledge and understanding

- D1.3 have an in-depth knowledge of the scientific method of investigation applied to even complex systems and innovative technologies that support information technology and its applications;
- D1.8 ability to read and understand specialist scientific documentation, such as conference proceedings, articles in scientific journals, technical manuals.

Making judgments
- D3.1 ability to independently select documentation from various sources, including technical books, digital libraries, technical scientific journals, web portals or open source software and hardware tools.

Communication skills
- D4.1 ability to present the contents of a scientific/technical report in a set time in front of an audience, including non-specialists;
- D4.4 ability to prepare and deliver presentations with technical content in English;
- D4.7 ability to synthesise knowledge gained from reading and studying scientific and technical documentation and to prepare reports and presentations.

Learning skills
- D5.1 ability to independently extend the knowledge acquired during the course of study by reading and understanding scientific and technical documentation in English;
- D5.2 ability to independently keep up to date with developments in the most important fields of information technology.

Assessment

For attending students
Coursework [45% of mark] + video seminar [45% of mark] + final exam (oral) [10% of mark]

Coursework. During the course, students will actively participate by reading papers, critically analyzing, presenting, and discussing their content. This assessment component is needed to assess learning skills, communication skills, and making judgment skills.

Video seminar. Students will be assigned randomly to one of the course topics and receive research papers to prepare a 15-minute video seminar. This assessment component is needed to assess learning skills, communication skills, and making judgments. In case of a positive mark, the mark will count for the remaining regular exam sessions of the academic year. A new video seminar needs to be submitted for the next exam session in case of a negative mark. This assessment component is needed for knowledge, understanding, and learning skills.

Final exam (oral). Verification questions about the topics of the course. This assessment component is needed for knowledge, understanding, and learning skills.
For non-attending students

Three video seminars [90% of mark] + final exam (oral) [10% of mark]

Video seminar. Students will be randomly assigned research papers to prepare three 15-minute video seminars (one per course topic). This assessment component is needed to assess learning skills, communication skills, and making judgments. In case of a positive mark, the mark will count for the remaining regular exam sessions of the academic year. A new set of video seminars needs to be submitted for the next exam session in case of a negative mark. This assessment component is needed for knowledge, understanding, and learning skills.

Final exam (oral). Verification questions about the topics of the course. This assessment component is needed for knowledge, understanding, and learning skills.

Note: Attendance is not compulsory, but strongly recommended.

</table>
| Evaluation criteria and criteria for awarding marks | For attending students
To enroll in the oral exam, a student must:

- Deliver the video seminar (the video seminar must be evaluated BEFORE the final exam, otherwise the exam cannot be registered).
- Have earned a sufficient evaluation of both the coursework and the video seminar.

For non-attending students
To enroll in the oral exam, a student must:

- Deliver the three video seminars (the video seminars must be evaluated BEFORE the final exam, otherwise the exam cannot be registered).
- Have earned a sufficient evaluation of all three video seminars.

Relevant for assessment:
- Coursework: ability to independently select documentation from various sources; ability to prepare and deliver presentations (in English) with scientific/technical content; ability to read and understand specialist scientific documentation; ability to summarize in own words, evaluate, and establish relationships between topics; skills in critical thinking; methodological rigor.
- Video seminar: quality of the video seminar (according to the guidelines provided during the course); ability to independently select documentation from various sources; ability to prepare and deliver presentations (in English) with scientific/technical content; ability to read and understand specialist scientific documentation; ability to summarize in own words, evaluate, and establish relationships between topics; skills in critical thinking; methodological rigor.
- Final exam (oral): correctness of answers; clarity of answers; ability to summarize in own words, evaluate, and establish relationships between topics; skills in critical thinking.
