Course description	<p>The course belongs to the class "di base" in the curriculum in Art.</p> <p>Description Module 1 – Praxis: The course introduces students to contemporary art practice and prepares them to undertake individual and collaborative projects. The curriculum focuses on artistic methods and strategies that emerged in the XX and XXI centuries and provides an interdisciplinary introduction to the use of the medium and the intellectual development and understanding of art, from initial concept to completion. In addition, relevant contemporary vocabulary and reflective tools are explored and employed to become familiar with the palette from which art is made and communicated to its recipients in an ad hoc manner. Methods and strategies are explored through monthly assignments that illustrate how conceptual considerations translate into the potential of a work of art. In the process, art students learn how to address the chosen material of artistic production and establish relationships between form and meaning that will lead them to a canon of contemporary artistic quality.</p>
---------------------------	---

	<p>The course will actively support students in developing an understanding of how to conceive, plan, and produce their own artistic work by discussing their progress with academic staff and professional figures from the art world.</p> <p>Finally, students acquire a manual for understanding the diversity of artwork and exhibition design as an active, experimental cultural form that consciously engages with the world around them.</p> <p>In the video practice component, students acquire a basic knowledge of the components of cinema and understand them as workable materials with a complex and productive relationship to reality. The course emphasises ecology and the environment in the broadest sense and addresses the role of media and the media maker in this context.</p> <p>Description Module 2 – Theory: The course is an introduction to the different art theories of the 20th century and the present. On the basis of selected texts by well-known art theorists and artists, main currents and individual points of view will be discussed in order to gain an overview of how the visual arts have been perceived, interpreted and understood since modernism up to the present. The genres of image, object, performance and exhibition are given special consideration. The reading seminars are extended by museum visits to learn perceptual skills and to be able to transfer observations into written discourses. The overall aim of the course is to be able to evaluate one's own artistic position critically.</p>
<p>Specific educational objectives</p>	<p>Knowledge and understanding</p> <ul style="list-style-type: none"> - have acquired their own project methodology in the field of visual arts. This methodology includes the ability to oversee all phases of design, from the generation of ideas to the realisation of the finished project. Through the integrated teaching of project subjects and subjects of a technical, scientific and theoretical nature, graduates will be able to simultaneously address all these aspects and consider them as synonymous with the development of a project that is successful on a formal, technical, scientific and cultural level. - have acquired the ability to grasp and analyse contemporary cultural and social phenomena that characterise art.
