

COURSE DESCRIPTION – ACADEMIC YEAR 2023/2024

Course title	RESEARCH METHODS PHD
Course code	71047
Scientific sector	INF-01
Degree	Ph.D. in Computer Science
Semester	second
Year	2023/2024
Credits	6
Modular	No
Total lecturing hours	36
Attendance	mandatory
Prerequisites	There are no specific prerequisites for this course.
Specific educational objectives	<p>The course belongs to the type “area affine integrativa”.</p> <p>It is compulsory for all students enrolled in the PhD program in Computer Science, to fulfill the credit requirements for the 1st year of the PhD.</p> <p>The course introduces the most important research approaches and to the main research-related activities that PhD students will have to carry out during their PhD, and also if they later pursue a career as researchers in academia or industry.</p> <p>The main objective is to teach PhD students some basic skills they will need when autonomously conducting research. The course covers general aspects that are relevant to research in any scientific discipline, but specifically focuses on Computer Science when illustrating the main notions and for the exercises and projects assigned to the students.</p>
Lecturers	Diego Calvanese, Antonella De Angeli, Marco Montali, Werner Nutt, Pretto Niccolò
Contact	Piazza Domenicani 3 , Room 2.07, calvanese@inf.unibz.it , 0471-016160
Scientific sector of lecturer	ING-INF/05 and INF-01
Teaching language	English
List of topics	<ul style="list-style-type: none"> • Introduction to research and scientific paper reading and writing • Research evaluation • Presenting scientific work • Good scientific writing style • Empirical/experimental CS research methods • How to write a research plan
Teaching format	The course consists of 6 units, each with frontal lectures, assignment and subsequent solution of exercises and/or assignment of a small project and subsequent discussion of the proposed solution.
Learning outcomes	<p>Knowledge and understanding:</p> <ul style="list-style-type: none"> • Understand the research methods in scientific disciplines.

	<ul style="list-style-type: none"> Understand the research methods in computer science. <p>Applying knowledge and understanding:</p> <ul style="list-style-type: none"> Be able to conduct autonomous research in a scientific discipline. Be able to read and understand scientific literature. Be able to write a scientific article. Be able to write a research plan. <p>Making judgments</p> <ul style="list-style-type: none"> Be able to identify reasonable research goals and estimate the resources required to achieve the research objectives. Be able to evaluate the research carried out by peers. <p>Communication skills</p> <ul style="list-style-type: none"> Be able to present in a fixed time the own research to a specialized audience. Be able to present in a fixed time the own research to a general audience also composed of non-specialists. <p>Learning skills</p> <ul style="list-style-type: none"> Be able to autonomously extend the own knowledge by reading and understanding scientific articles. Be able to extend the state-of-the-art in a scientific discipline by identifying open problems and proposing innovative solutions to solve them.
Assessment	<p>Each unit assesses the fulfillment of the requirements through an assignment that the students carry out between the first and the second lecture for the unit, which are typically held at the beginning and end of a week, respectively.</p> <p>The assignment is evaluated and discussed during the second lecture of each unit. Typical forms of assignment are:</p> <ul style="list-style-type: none"> correction or improvement of a scientific article. evaluation/review of scientific articles. preparation of a presentation about scientific work. writing of (a portion of) a research plan.
Assessment language	English
Evaluation criteria and criteria for awarding marks	<p>The exam is pass/fail and no marks are awarded.</p> <p>Relevant for the assessment are the following: clarity of exposition, ability to summarize, evaluate, and establish relationships between topics, ability to present scientific notions, ability to evaluate research results by others.</p>
Required readings	<p>The reading material is specified during the course. It consists of the slides prepared by the various lecturers of the six units and presented during the course, and of additional material that the lecturers list on the on the slides.</p>
Supplementary readings	<p>Additional reading material is made available on the course Web Page http://www.inf.unibz.it/~calvanese/teaching/PhD-RM/</p>
