COURSE DESCRIPTION – ACADEMIC YEAR 2023/2024

Course title | Engineering Thermodynamics and Heat Transfer
---|---
Course code | 42186
Scientific sector | ING-IND/11
Degree | Bachelor in Industrial and Mechanical Engineering (L-9)
Semester | 2
Year | 
Credits | 6
Modular | No

Total lecturing hours | 40
Total lab hours | 20
Attendance | Not mandatory
Prerequisites |
Course page | Microsoft Teams and https://ole.unibz.it/

Specific educational objectives
✓ During the course, the issues related to heat transfer will be presented and analyzed in particular: Analytical models of heat transmission in its forms like:
✓ first law of thermodynamics
✓ mechanisms of heat transfer
✓ conduction
✓ convection
✓ irradiance
✓ Initial and boundary conditions
✓ steady state heat transfer
✓ heat exchangers
✓ second law of thermodynamics
✓ acoustics: principles and applications

Lecturer | Dr. Marco Caniato
Contact | mcaniato@unibz.it
Scientific sector of lecturer | ING-IND/11
Teaching language | English
Office hours | Before lectures
Lecturing Assistant (if any) | none
Contact LA |
Office hours LA |
List of topics
• **FUNDAMENTALS OF THERMODYNAMICS**
• Units of measure and fundamentals of Thermometry.
• First Law of Thermodynamics
• Application Areas of Heat Transfer
• Modeling in Heat Transfer
• Specific Heats of Gases, Liquids, and Solids 7
• Energy Transfer
• HEAT TRANSFER
• Heat transfer mechanisms. Thermal heat conduction in monodimensional systems in steady state.
• Thermal Conductivity
• Thermal Diffusivity
• Thermal heat convection and dimensional analysis.
• Boundary and Initial Conditions
• Thermal Contact Resistance
• Global heat transfer and heat exchangers. Thermal radiation.
• Numerical models for heat transfer
• Second law of thermodynamics
• Wave propagations in solids and fluids
• Psychoacoustics
• Sound pressure level and Sound Power level
• Sound Intensity
• Sound absorption and sound Insulation
• The measures in acoustics

Teaching format
Class lectures (Videos and slides)
exercises using spreadsheets and numerical simulations
Lecture material (slides and videos) will be available for download by the students.

Learning outcomes
The learning outcomes need to refer to the Dublin Descriptors:

(1) Knowledge and understanding
- energy balance terms
- heat transfer mechanism influences and different efforts on dissipations
- heat transfer behaviors
- heat exchangers functions and design
- Acoustics and sound wave propagation

(2) Applying knowledge and understanding
- the ability to solve the main heat transfer models applied to the different heat transfer behaviors
- the ability to apply basic heat transfer mechanism to the design of simple heat exchangers
- The ability to apply and solve simple problems in acoustics

(3) Making judgements
The student will be able to understand and compare and then choose the appropriate heat transfer behaviour in relation to a simple final application and sizing also using numerical simulations

(4) Communication skills
- Using the appropriate technical vocabulary related to the topic
- Preparing a report representing and summarizing complex results and providing appropriate interpretation
(5) Ability to learn
- Lifelong learning capability through the acquisition of critical tools and critical evaluation of product and systems specifications
  - finding the analytical expression and the correct numerical solution, comparing different methodologies and sources

### Assessment

<table>
<thead>
<tr>
<th>Form</th>
<th>Length /duration</th>
<th>ILOs assessed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development of the assigned design work</td>
<td>During the course</td>
<td>(2), (3), (5)</td>
</tr>
</tbody>
</table>

### Summative assessment

<table>

<tr>
<th>Form</th>
<th>%</th>
<th>Length /duration</th>
<th>ILOs assessed</th>
</tr>
</thead>
<tbody>
<tr>
<td>In class (or office hours) exercises and discussion</td>
<td>100</td>
<td>20 hours (average for 30 minutes per exercise or oral discussion)</td>
<td>(1), (2), (3), (4), (5)</td>
</tr>
</tbody>
</table>

**Assessment language**: English

**Assessment Typology**: Monocratic (Collegiale se esame modulare)

**Evaluation criteria and criteria for awarding marks**

To the admission to the second part, the first one has to be successfully passed. The first part (numerical exercise) consists of numerical questions. The answer is correct when the result provided falls within a given tolerance with respect to the reference value. The evaluation is based on the accuracy of the numerical result of each question. The minimum mark is 12 out of 30 suitable to pass to the second part.

The score of this part contributes for 1/2 to the final mark.

In the second part, each question concerns a different section of the program. They equally contribute to the final mark.

The evaluation is based on the completeness of the answer in terms of 1) definition of the subject 2) analytical description 3) graphical and mathematical representations 4) proof (if required). The score of this second part contributes for 1/2 of the final mark.
