

## COURSE DESCRIPTION – ACADEMIC YEAR 2025/2026

<b>Course title</b>	<b>Programming and Visualization for Data Science</b>
<b>Course code</b>	27500 (loaned from course 73081)
<b>Scientific sector</b>	INF/01 – INFO-01/A
<b>Degree</b>	Master in Data Analytics for Economics and Management – LM-DATA (loaned from Master in Computing for Data Science – LM-18)
<b>Semester</b>	1
<b>Year</b>	1
<b>Credits</b>	12
<b>Modular</b>	Yes

<b>Total lecturing hours</b>	80
<b>Total lab hours</b>	40
<b>Attendance</b>	Not compulsory. Non attending students have to agree with the lecturer on the modalities of independent study at the beginning of the course.
<b>Prerequisites</b>	Basic programming concepts
<b>Course page</b>	<a href="https://ole.unibz.it/">https://ole.unibz.it/</a> and <a href="https://teams.microsoft.com/">https://teams.microsoft.com/</a>

<b>Specific educational objectives</b>	<p><b>Module 1: Introduction to Programming for Data Science</b></p> <p>The course is designed to provide specific professional skills for advanced programming in Python. The students will learn how to develop a Python program, starting from designing it, and going through coding, testing and validation. They will master Python in its full object-oriented features, learning how to develop complex programs that are well structured, and make use of techniques for code re-use, pipelining, maintenance, and deployment.</p> <p><b>Module 2: Data Visualization and Exploration</b></p> <p>The course is designed to acquire professional skills and knowledge useful when dealing with large-scale datasets. In particular, the students will master data collection, exploration, transformation, curation, analysis, and visualization, choosing the most appropriate technique for the data at hand. They will make insights from the data, supported by a rigorous data science pipeline, which starts with raw data, produces machine learning models, and ends with advanced visualizations. This module, addresses common pitfalls that can mislead the analysis and makes extensive use of specialized Python libraries, acquiring the best practices of reproducible, data-driven analysis and research.</p>
----------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<b>Module 1</b>	<b>Introduction Programming for Data Science</b>
<b>Module code</b>	27500A
<b>Module scientific sector</b>	INF/01 – INFO-01/A
<b>Lecturer</b>	TBD
<b>Contact</b>	

<b>Scientific sector of lecturer</b>	INF/01 – INFO-01/A
<b>Teaching language</b>	English
<b>Office hours</b>	Arranged beforehand by email
<b>Lecturing assistant (if any)</b>	--
<b>Contact LA</b>	--
<b>Office hours LA</b>	--
<b>Credits</b>	6
<b>Lecturing hours</b>	40
<b>Lab hours</b>	20
<b>List of topics</b>	<ul style="list-style-type: none"> <li>• Introduction to Python and programming environment</li> <li>• Python data structures and programming primitives</li> <li>• Object-oriented programming in Python</li> <li>• Writing structured/reusable code in Python: functions, classes, libraries</li> <li>• Code documentation, testing, version-control, and distribution</li> <li>• Advanced Python programming</li> </ul>
<b>Teaching format</b>	<p>Frontal lectures, lab assignments, project work.</p> <p>The course adopts a blended, student-centred approach that emphasises problem-based learning and active engagement. A portion of the lecture content is made available online in advance, allowing students to explore key concepts independently and at their own pace before attending class. This preparatory work enables in-person sessions to focus on the application of knowledge through real-world problems, collaborative activities, and guided discussions — fostering critical thinking and deeper learning. The course is fully aligned with the principles of the Italian Universities Digital Hub (EDUNEXT) initiative (<a href="https://edunext.eu">https://edunext.eu</a>), which promotes the integration of digital resources and active learning strategies within university teaching.</p>

<b>Module 2</b>	<b>Data Visualization and Exploration</b>
<b>Module code</b>	27500B
<b>Module scientific sector</b>	ING-INF/05
<b>Lecturer</b>	<a href="#">Antonio Liotta</a>
<b>Contact</b>	<a href="mailto:antonio.liotta@unibz.it">antonio.liotta@unibz.it</a>

<b>Learning outcomes</b>	<p>Knowledge and understanding:</p> <ul style="list-style-type: none"> <li>Knowledge of the key concepts and technologies of data science disciplines</li> <li>Understanding of the skills, tools and techniques required for an effective use of data science</li> <li>Knowledge of principles, methods and techniques for processing data in order to make them usable for practical purposes, and understanding of the challenges in this field</li> <li>Knowledge of the challenges in the field of man-machine interface and of the methods and techniques for overcoming these challenges</li> </ul> <p>Applying knowledge and understanding:</p> <ul style="list-style-type: none"> <li>Practical application and evaluation of tools and techniques in the field of data science</li> <li>Ability to develop programmes and use tools for the analysis and management of data and related infrastructures</li> <li>Practical application and evaluation of tools and techniques for data analysis</li> <li>Design, application and evaluation of technologies and tools for human-machine interaction, data exploration and data visualization</li> </ul> <p>Making judgments</p> <ul style="list-style-type: none"> <li>Ability to autonomously select the documentation (in the form of books, web, magazines, etc.) needed to keep up to date in a given sector.</li> </ul> <p>Communication skills</p> <ul style="list-style-type: none"> <li>Ability to use English at an advanced level with particular reference to disciplinary terminology</li> <li>Ability to present one's work in a clear and comprehensible way in front of an audience, including non-specialists</li> <li>Ability to structure and draft scientific and technical documentation</li> </ul> <p>Learning skills</p>
--------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<ul style="list-style-type: none"> <li>Ability to deal with problems in a systematic and creative way and to appropriate problem solving techniques.</li> </ul>
<b>Assessment</b>	<p>The exam modalities are the same for both the attending and the non-attending students. Project work (70% of the final grade) and oral exam (30% of the final grade). All project works must have been submitted, at the very latest, 15 days ahead of the oral exam. In case of a positive mark, the projects will count for all 3 regular exam sessions.</p>
<b>Assessment language</b>	English
<b>Assessment Typology</b>	Collegial
<b>Evaluation criteria and criteria for awarding marks</b>	<p>70% project work, 30% oral exam.</p> <ul style="list-style-type: none"> <li>Relevant for project work: clarity of presentation, ability to gain useful and novel insights from data, creativity, critical thinking, ability to adhere to reproducible research best practices</li> <li>Ability to use Python to write, evaluate and deploy advanced, object-oriented computer programs</li> <li>Ability to use Python to employ (understand, recall and use) data analytics methods in practical settings, from data collection and curation, to data analysis, modelling and visualization.</li> </ul>
<b>Required readings</b>	<ul style="list-style-type: none"> <li><i>Data Visualization. A practical introduction.</i> Haley. Available online</li> <li><i>A layered grammar of graphics.</i> Wickham. Available online</li> <li><i>Python Data Science Handbook</i>, by Jake VanderPlas. O'Reilly Media (1<sup>st</sup> Edition, 2016).</li> </ul> <p>Subject Librarian: David Gebhardi, <a href="mailto:David.Gebhardi@unibz.it">David.Gebhardi@unibz.it</a></p>
<b>Supplementary readings</b>	<ul style="list-style-type: none"> <li><i>Fundamentals of Data Visualization.</i> Wilke. Available online</li> <li><i>Visualization Analysis and Design.</i> Munzer. Amazon</li> <li><i>Data Visualization: Charts, Maps, and Interactive Graphics.</i> Grant. Amazon</li> <li><i>Doing Data Science.</i> Cathy O'Neil, Rachel Schutt. O'Reilly, 2013, <a href="https://www.oreilly.com/library/view/doing-data-science/9781449363871/">https://www.oreilly.com/library/view/doing-data-science/9781449363871/</a></li> <li><i>Python for Data Analysis.</i> By Wes McKinney. O'Reilly, 2nd Edition, 2017, <a href="https://www.oreilly.com/library/view/python-for-data/9781491957653/">https://www.oreilly.com/library/view/python-for-data/9781491957653/</a></li> </ul>
<b>Software used</b>	<ul style="list-style-type: none"> <li>Jupyter Notebook (for Python programming)</li> </ul>
