

University Academic Curriculum Vitae

Personal details

Name: Maurizio Grigiante
Place and date of birth: Asiago, 23/03/1965
Nationality: Italian
Address: via Camona 3/A, 36032 Gallio (VI) Italy
Tel. Office: +39 0461 282653 (mob. 348-7291526)
E-Mail: maurizio.grigiante@unitn.it

Current position

- Job title: Associate Professor
- Starting date: 01/07/2016
- Employer: University (University of Trento)

Teaching qualifications

- Year and title of first degree; 1995: Master degree in Chemical Engineering, University of Padova (Italy)
- Year, subject area and topic of PhD; 2001 Thermodynamics (University of Padova): analysis of properties of refrigerant fluid and study of their performances on innovative refrigerant cycles. Investigations on both experimental and modeling activities. Applications involved on existing plants and tests aiming at evaluating the performances of innovative fluids and their mixtures.
- Year, subject area and topic of habilitation; 2013 Fisica Tecnica Ing-Ind 10, University of Trento.
- Brief description of scientific responsibilities that might benefit the teaching activity: teaching similar issues as those of the requested course Responsibilities in research activities involving topics considered relevant for the teaching issues. Integration of different disciplines having potential interest with the teaching activities and course as thermodynamics and renewable energy.

Courses taught during the last 5 years

- Title of courses: Fisica tecnica, Energie Rinnovabili, Thermodynamics, District Heating Systems Design
- Name of university/institute: University of Trento

Subject area:

Fisica tecnica: fundamentals of heat and mass transfer of close and open systems; thermodynamics principles, limits and applications. Energetic analysis of systems involved on industrial applications. Modeling of the energy systems and design of basic industrial appliances.

Language: Italian; Academic level: post-graduate; Teaching hours: 60

Energie Rinnovabili: analysis of the most diffused renewable energy systems as solar energy, photovoltaics, biomasses and geothermal energy. Analysis of the models involved to calculate the available natural resources and modeling activities dedicated to the determination of the main parameters of the corresponding renewable energy plants: energy production efficiency of the plants and economic evaluation of the global energy exploitation strategies.

Language: Italian; Academic level: post-graduate; Teaching hours: 60

Thermodynamics: advanced thermodynamics for industrial Engineers specifically dedicated to applications involved on innovative industrial plants (power plants, refrigerant plants, appliances etc.). Equations of states and thermodynamic models and correlations to determine the main thermodynamic properties of fluids and their mixtures. Applications on problems involved on heat and mass transfer: numerical methods integrated with solutions methods. Conditioned air system design and their applications on widely diffused appliances.

Language: English; Academic level: post-graduate and PhD;
Teaching hours: 60.

District Heating Systems Design (DHSD): analysis of the advantages involved on the modern approach of heating systems integrated on district strategies. The role of renewable energies when integrated in traditional district energy systems. Analysis of real cases of traditional and integrated district heating systems regarding the energy uses not only on residential

contest but also for industrial district energy applications. Analysis of the most advanced procedures for the district heating and cooling design.

Language: English; Academic level: post-graduate; Teaching hours: 60.

Professional experience related to the teaching position

Chronological list of all previous employments

(Please report any details that will enable the commission to evaluate how the professional experience of the candidate will benefit the teaching activity successfully)

- **Job Title:** Engineer
- **Data:** from 01/10/1997 to 10/10/1999
Project Engineer at HIROSS Int. Company.
- **Level:** Supervisor

This employment has allowed to the employer the opportunity to work as engineer on a big company specifically applied on refrigeration processes involved on several industrial productions including food processing technologies and air systems conditioning. The employer had the opportunity to have a significant experience both on design, on testing and monitoring the behavior of several innovative technologies involved on the cited technologies. He gained a good experience in particular in evaluating the effects of several thermal treatments (most regarding refrigeration) when applied in conditioning the state of materials like food, chemical products and substances widely used in industrial applications. The employer considers this experience as a particular skill having benefits for the teaching activities he is applying for.

- **Job Title:** Researcher
- **Data:** from 01/06/2012 to 01/06/2014
project coordinator of "CAReS" project at the University of Trento
- **Level:** Researcher coordinator

This experience jointly with the activities of research carried out at the University of Trento has given to the employer the opportunity to investigate in details the effects of thermal processes carried out at high temperature conditions.

Even if this research activity was specifically dedicated to biomass process exploitation, the investigation was particularly attractive considering that several topics of the research issues have been deeply carried out during the indicated period: the efficiency of the process design and plants, the kinetics and thermodynamics of thermal treatments at different conditions and the impact of these treatments on the environmental air conditions (indoor and outdoor) and pollutions. As coordinator of the project, the employer has the opportunity to gain experience in the management of a complex project involving not only the University but also private companies by involving a significant number of collaborators.

- Experiences

The employer, during his research employment at the University of Trento has the opportunity to spend several periods of studies abroad as researcher at outstanding Institutions as the University of Oldenburg (Germany) and the Ecole des Mines in Paris. He has dedicated his research in particular in studying the innovative refrigerants fluids and their impact on the main parameters adopted to evaluate the performances of widely appliances and plants. This is a specific background that the employer consider of high impact to benefit the teaching activities of the indicated call.

Scientific publications related to the teaching position

- **Publications** over the last 10 years in chronological order within each category following the international standard for bibliographic references with DOI whenever possible
 - **International Journals**
