## RESEARCH INTERESTS

I am an agroecologist broadly interested in understanding how anthropogenic changes such as climate and land-use change affect mountain agroecosystems, and how this in turn affects human well-being. In my research I mainly use quantitative methods, including geo-statistical and spatial modeling, to gain new insights in the complex interactions between people and nature, and to find land management strategies that help to inform stakeholders and policy makers alike. My work is highly interdisciplinary, and I regularly collaborate with specialists in other fields, ranging from agronomists to human geographers and software developers.
