<b>Statement of interest</b>	I have grown with a passion for knowledge, and for this reason, I built a plan for achieving the long-term aim of being a researcher. My CV shows the running story of this life-long project, which has already led me to be aware of the relevance to diversifying training and job contexts. I did my study and part of my job as a researcher at the Catholic University of Sacred Heart, finding a rich ground that defines the basis of my professional shape. Differently, at the Vrije University of Amsterdam I have had the opportunity to explore the exciting field of neuroscience research learning how to use an EEG, merging this technique with the more classical behavioral, psychological research. Finally, by working in a neuro-rehabilitation center, I got the occasion to deepen my knowledge about different neuroimaging techniques (fMRI and fNIRS) and work with people facing severe clinical conditions and atypical developmental paths. The interdisciplinary research can reach a wider audience addressing the multifaced features of human development, helping deepen our comprehension of such developmental mechanisms

	and how to support them. My research and teaching experience at the Faculty of Education, Free University of Bolzano-Bozen, perfectly fits my concept of the best summary related to the different dimensions that compose the researcher profile in developmental psychology. Here, the several and interdisciplinary national and international research networks open at the opportunity to perform sound research projects and teach to whom will teach in our schools, translating what we acquire from research into practice. Once and for all, in science, I found my passion; research and teaching are two different ways to make this passion a way to live.
